Our journey towards
vocational excellence
in the EU water sector

Water and Beyond

A person wearing a blue shirt is crouched behind a concrete drainage structure, possibly a culvert or a small bridge. They are surrounded by dense green vegetation, including ferns and other leafy plants. The person appears to be working on or inspecting the structure. The scene is outdoors, with a concrete structure and a body of water visible in the foreground.

We educate the future water sector professional that the emerging water sector needs.

With the Platform of Vocational Excellence Water project reaching it's half way point, we reflect on the work done so far developing the Centers of Vocational Excellence Water in our partner countries. The first important step was to create a close understanding of the skills ecosystem of the water sector in each country, and gaining intimate knowledge about the economic and societal needs. By making a so called context scan of each country involved, we have provided a strong basis to build the Centers of Vocational Excellence Water on. The partners in the Platform of Vocational Excellence have taken the following steps over the last year.

Water and Beyond
