

GREEN INITIATIVE IN LAO PDR

Complementary areas

- Climate resilient infrastructures and connectivity
- Sustainable tourism & heritage
- Green and renewable energy
- Green cities

Phakhao Lao

(Lao concept for "Farm to Fork")

Transition to sustainable agriculture value chains, stimulated by fostering an inclusive, climate-resilient and market-oriented production. This will also seek to promote a safer and more diverse diet and transform consumption patterns.

Sustainable agriculture

Green value chain development

Food safety & nutrition

Integrated landscape & watershed management

Forest/ ecosystems restoration & biodiversity conservation

Forest livelihoods, timber & non-timber value chains

Forest Partnership

Harness the green growth potential by sustainably managing the rich natural capital of forests and protected areas, improving land-use and watershed management, and promoting sustainable timber and non-timber forest products' value chains. This will seek to reverse forests/ ecosystems loss, promoting biodiversity conservation and reducing vulnerability to climate change.

Green catalysers

- Digitalisation
- Green skills and youth employment
- Governance (gender, decent work, green justice, green budgeting, land, business climate)
- Business and trade facilitation, and regional integration

The #TeamEurope Green Initiative aims to make a transformational contribution to the Lao PDR's Green Growth Agenda 2030. It seeks to focus and integrate coherently the support of the European Partners in areas which have a high potential for climate-adaptation action, private sector development, international trade, and sustainable socio-economic development.

Innovative financial tools will be used (including mixing grants and loans, and development guarantees to de-risk investment), to leverage on traditional cooperation modalities, in order to catalyse investments from MSMEs and international investors.
