The Climate-Smart Rice Growing project, implemented since September 2020 by the consortium of [Eclosio](#), [ecotourismebenin](#) and TIC ABC, came to an end this year.

This project, based on the innovative [Smart-Valleys](#) approach, aimed to develop lowland irrigation (valley bottoms) to produce rice in sub-Saharan Africa, through a participatory, sustainable and low-cost approach, with the support of the Intra-ACP GCCA+ programme.
