Knowledge For Development without Borders (KFDWB)

"The mission of KFDWB is to provide worldwide Development Aid Support services to development agencies, organizations, local governments, NGOs public and private institutions by helping local communities know and understand which human development challenges and/or frustrations they are facing each day, and make these information and knowledge universally accessible via a central database and useful to development organizations and local and national responsible bodies in order to highlight and alleviate the problems at a community level to reach the Millennium Development Goals (MDGs) and the forthcoming Sustainable Development Goals (SDGs) in each corner of the globe" [*Development Aid Support*]

Abstract

The struggles and upheavals around the world have highlighted the lack of sufficient knowledge and a Global Service Support Worldwide for supporting local people, local governments as well as the workers who work in sustainable and worth-living integrated development.

Research shows that there is also a lack of connection between local environments that do not record and monitor the Millennium Development Goals that were addressed at the UN (2000). Knowledge must be developed continuously for the purposes of survival and successes of our current and future generations.

"Knowledge for Development without Boarders" initiative is a Global Services Support worldwide for Sustainable Development Goals (SDGs) through the promotion of simple and good practices of the Millennium Development Goals (MDGs) to reach sustainable, worth-living integrated development.

"Knowledge for Development without Borders" will provide support for data collection, accurate information dispersion and knowledge sharing system which consequently will be able to better monitor the sustainability through its knowledge accumulation.

It is believed that we need to achieve higher levels of consciousness and address them through the local environment such way that we will see positive results at Open Government Partnership (OPG's) and non OPG's levels. Given that people do not have the tools or the system where the data can be collected; the weak link will be closed now through the "Knowledge for Development without Borders" organization. "Knowledge for Development without Borders" is a non-profit international and interdisciplinary organization, multi-stakeholder, that supports the implementation of the Millennium Development Goals (MDGs).

The organization has an open global platform for development, networking, to pursue, monitor, track and support worldwide the Millennium Development Goals (MDGs) by providing real time knowledge and information based on the goals established by the MDGs. The intend is to engage people from all backgrounds and create that system which represents the new OGP (Open Government Partnership).

The mission of "KNOWLEDGE FOR DEVELOPMENT WITHOUT BORDERS" hubs will detail on which activities must be carried out according to seven regions: Asia, Africa, North America, South America, Antarctica, Europe, and Australia. Each zone's research specialists will pursue, observe, monitor and report any issues on social and environmental well-being worldwide wherever people and other beings are living. Their daily pursuing, watching and monitoring efforts are a prerequisite for tracking and responding well to the world´s most difficult development challenges. Data monitored and reported will become integrated into the UN database, that will be used by Open Government Partnership's and non-OPG in future decisions regarding sustainability and development that will impact the life of our generation and the future of our children.

1. Why do we think that a new program like Knowledge for Development Without Borders is so important?

We believe that there is a mass of population in the world without access to information and proper knowledge about the benefits of the Millennium Development Goals (MDGs). We believe that there is not enough awareness about the Millennium Development Goals (MDGs) and their purpose. We believe that developmental organizations, community practices, NGOs, public and private institutions, government as Millennium Development Goals (MDGs) have to reflect the condition of all people classes (Rich and Poor) worldwide. We have all witnessed or been part of the failure of some Millennium Development (MDGs) Goals to achieve their assigned objectives. We believe that knowledge for development needs to be transmitted free of any costs, equally across the world, for the benefit of mankind and life. Due to the lack to access the database that has accurate information and knowledge, the decision makers require years to intervene. A knowledge database daily report system on the ground closes the existing gap. Our organization will have the ears and eyes on the grounds, wherever and worldwide. UN, all development agencies, NGOs, private and public institutions, local and central governments etc. must receive accurate information, knowledge and feedback in real time for better decision making and timely intervention.

2. What do we do?

We inform worldwide population about meaning and benefits of MDGs. We motivate and engage worldwide population with the best practices of MDGs. We provide accurate, live, real time information and knowledge as well as Service Support worldwide 24x7 regarding achievement, monitoring and maintenance of the MDGs.

We complete the ongoing efforts and work with all international, local development organizations, development agencies, foundations, governments, private and public institutions. We assist Development Organizations, NGOs, Foundations, local governments, donators, charity organizations, private and public institutions etc. to update on real time their aid and open databases for decision making and intervention as we have ears and eyes on the grounds, wherever and worldwide.

We support research institutions to translate development materials into local best practices worldwide. We are supporting ongoing development projects to match with the socio-cultural context. We provide accurate information and knowledge on the socio-cultural context for better evaluation, decisions, and successfully interventions or investments.

Our organization teams, mobilize and engage all people without making any distinction from around the world, and consider everybody as part of one family for the good purpose, achievement, monitoring and maintenance of the Millennium Development Goals (MDGs) which is our social and environmental well-being of our lovely planet.

We mobilize local communities, communities' practices, local governments, remotes areas, villages etc. to engage and contribute to the achievement and maintenance of the Millennium Development Goals (MDGs) while not

neglecting to help them to access the minimum sociocultural infrastructure that guarantees the human existence requirements. We are focusing on exploring simple, practical, viable and dynamic solutions, as we have ears and eyes about informing, engaging, mobilizing and working hand in hand with local people in each corner of the world for the achievement and maintenance of the Millennium Development Goals (MDGs).

We are dynamic as we are working hand in hand with local communities, communities' practices, local governments and development agencies to sounding an alarm and inform on social and environmental issues that could handicap the achievement and maintenance of the Millennium Development Goals (MDGs). We understand that diseases, poverty, social inequity, and violence etc. do not need passports or clearance to cross borders and agencies.

We report, categorize, classify data, information and knowledge on our a central database as a log file from live experience on the grounds that we believe in, that we can demonstrate, share and show live with all without restriction with respect of private data, information and knowledge.

3. Some examples of activities carried out by our Organization

The rain forest will disappear without intervention we will sound the alarm by the local government and international development organizations for intervention.

There are suspicious, unsustainable and unofficial social, economic or environmental activities that could affect the lives of a group of populations and the local environment we will sound the alarm by the local government and local/international development organizations for intervention.

There are suspicious consummations that could affect the lives of a group of populations and the local environment we will sounding the alarm by the local government and local/international development organizations for intervention.

There are suspicious unsustainable productions that could affect the lives of a group of populations and the local environment we will sounding the alarm by the local government and local/international development organizations for intervention.

The Bridge in a remote area is defect and it affects the lives of the local populations we will sound the alarm by the local government and international development organizations for intervention.

The water pumps in the rural community are suffering of the human infrastructures needed for the maintenance we will sound the alarm by the local government and local/international development organizations for intervention, and follow the access process to the human infrastructures.

Children are not sent to school and are held in slavery we will sound the alarm by the local government and local/international development organizations for intervention, and assist in the process of sending the children to school.

There is a group of populations who could not Keeping Warm in winter we will sound the alarm by the local government and local/international development organizations for intervention, and follow the process for helping Keeping Warm in winter.
Etc.

4. Who we are?

We are a group of volunteers sacrifice time, service for the initiation of a Global Services Support worldwide for Sustainable Development Goals (SDGs) through the promotion of simple and good practices of the Millennium Development Goals (MDGs) to reach sustainable, worth-living integrated development.

5. What are we looking for?

We are looking worldwide for volunteers, colleagues, friends, institutions, partners, universities, governments, foundations, privates, publics, NGOs, donors, individuals etc. to support, help us to develop this new program to assist development organizations and local governments for the worth management of the social and environmental well-being of our lovely planet.

The platform of Knowledge for Development Without Borders recognizes the individuals that donate their time, resource and energy to develop this program worldwide to help and support Development Organizations and others for the worth management of the social and environmental well-being of our lovely planet.

6. Conclusion

Knowledge for Development without Boarders' initiative is a Global Services Support worldwide for Sustainable Development Goals (SDGs) through the promotion of simple and good practices of the Millennium Development Goals (MDGs) to reach Sustainable, worth-living integrated development.

We think a simple action like Knowledge for Development without Borders will close temporary and on long term the lack of the access in real time to communication infrastructures as well as the lack of the access to accurate information and knowledge for worth development project and program evaluation, decision making and intervention as we have ears and eyes on daily basis on the grounds, wherever and worldwide.

So UN, all development agencies, NGOs, private and public institutions, local governments etc. must receive accurate information, knowledge and feedback in real time for better decision making and intervention.
