## Webinar – Phase I JNNSM and the future of Indian CSP

Mon, 01/23/2012 - 18:10 — [beaajor](#)

As we move into 2012 the progress made in phase I of India's National Solar Mission has been a subject of widespread debate, leaving many industry experts questioning the future of concentrated solar power in India. While many are quick to point out that projects must begin construction if they are to meet their 2013 completion deadline, others have seen the continued growth in capacity as a sure sign that CSP will remain a dominant part of India's renewable energy programme.

The future of government subsidies, increasing competition from photovoltaic's and the financing of projects in phase II, as well as the ability to build the critical foundations needed for a local manufacturing base, are at the centre of securing the future of Indian CSP. In addition to this the shortcomings of India's reverse bidding process in phase I has led many international experts to question whether the aggressive prices for projects can be upheld by plant developers.

To debate these critical industry challenges in greater depth, CSP Today has organized a free to attend webinar, taking place on **Wednesday 1st February at 9.30am GMT** (3.00pm IST). During this one hour interactive session, Dhruv Batra of **Cargo Power & Infrastructure**, Jose Luis Sanchez, Global Head Thermosolar Business Development at **Lanco Solar** and Jordi Castella from **Grupo Proener** will debate and discuss these critical topics:

- **The Outlook for India CSP:** Consider the impact of phase I on market growth looking at future government subsidies, PV competition, financing and CSP's tender ahead of Phase II
- **Project Development and Progress:** Drill down into the project development challenges unique to India and see how financial, technical and infrastructural challenges have been overcome
- **Indianization:** See if the critical foundations have been laid in phase I to build a 'local' manufacturing base in India to create jobs and increase support for CSP

Jack Ahearne, Event Director at CSP Today said 'in the initial launch of India's national solar mission there was an ambitious target of installing 20GW of Solar by 2022, with an emphasis on building a local manufacturing supply chain and creating jobs. However, to date it is clear that more needs to be understood on how to utilise the country's resources. We are looking forward to kick starting the discussion on how the future of Indian CSP can be secured with the webinar which is free to anyone to attend'.

The webinar can be joined for free at <https://www3.gotomeeting.com/register/953714566> and with limited spaces available it is advise that you sign-up early.

The programme is part of the preparation for the [3rd CSP Today India Summit](#), which is taking place 14-15 March in New Delhi.

More information about both the webinar and the event can be found at [www.csptoday.com/india](http://www.csptoday.com/india) or contact Jack Ahearne at [jack@csptoday.com](mailto:jack@csptoday.com)

## Southern Africa Region AFRETEP Project Workshop

**CSP Today: South Africa 2012** Thu, 12/15/2011 - 10:46 — [Tromburn](#)

Start: 15:18

The Joint Research Center of the European Commission is seeking candidate trainees for the Southern Africa Region workshop on the application of the renewable energy to rural electrification.

The initiative is financed by EuropeAid Development and Cooperation, Directorate-General of the European Commission.

The Southern Africa Region workshop will take place in the Southern Africa Region, in February 2012. The working language will be English.

Please, find attached open call.

**Southern Africa Region AFRETEP Project Workshop**  
Start: 10:46

**Start:** 02/13/2012 - 10:46

**End:** 02/17/2012 - 10:46

**Timezone:** Etc/GMT+1

#### Indonesians light up with biomass stove

Tue, 12/06/2011 - 18:16 — [innocentonah](#)

Thousands of Indonesians are making their own contribution in the fight against climate change by cooking with a type of stove that does not use kerosene or gas.

The inventor says the biomass stove, being cheap and easy to use, it can utilise bio waste like nutshells dramatically reducing the imprint on the environment.

With further propagation, it is hoped, the appliance will help reduce the country's emission of greenhouse gases - among the highest in the world.

Al Jazeera's Step Vaessen reports from Lombok in eastern Indonesia.

CAPACITY BUILDING

## AFRETEP Regional Workshops

Wed, 11/16/2011 - 09:52 — [irenepinedo](#)

Within the capacity building activities, AFRETEP project has organised a series of 3 regional workshops, inviting more than 100 participants from Sub-Saharan Africa countries. While the three workshops have had in common the exchange of expertise and experience with and within African Research Centres, the focus of each one was harmonised and decided together with the host region, seeking the fit between the training and expertise we can provide with their needs and interest.

Following this approach, the list of the regional workshops along with their topics are as follows:

**AFRETEP 1<sup>st</sup> Regional Workshop: East Africa.** It took place in Kampala, Uganda, from 3<sup>rd</sup>-7<sup>th</sup> October 2011 with the support of Centre of Research in Energy and Energy Conservation of the Makerere University. Regional topics: Social-economic aspects, Mini Hydro projects and Photovoltaic technology and mapping.

**AFRETEP 2<sup>nd</sup> Regional Workshop: West Africa.** It took place in Ouagadougou, Burkina Faso, from 7<sup>th</sup>-11<sup>th</sup> November 2011 with the support of Foundation 2iE. Regional topics: Biomass and Photovoltaic technology and mapping.

**AFRETEP 3<sup>rd</sup> Regional Workshop: Southern Africa.** *It will take place in South Africa, January or February 2012. Regional topics: Financial schemes and Photovoltaic technology and mapping.*

This section of the AFRETEP WorkGroup site aims at:

- gather the information provided during the above mentioned workshops.
- make this information available for the AFRETEP WorkGroup.

Please, use the following links to access the information of each workshop:

**African Renewable Energy Technology Platform, AFRETEP**

The African Renewable Energy Technology Platform (AFRETEP) aims at building a network of African research institutions dealing with renewable energy.

**OBJECTIVES AND ACTIVITIES**

The AFRETEP is one of the activities foreseen within the project "Scientific and Technical Support to Sustainable Energy Development in Africa: Rural Electrification, Renewable Energy and Communication". It is a three years project funded by the European Commission. The overall objective of this project is to contribute to understand the potential for renewable energy options in Africa for increased access to electrification in rural areas.
