

# Facilitating Sustainable Urban Development in the Partner Countries of the EU

## How can the UDTF help you?

If your Actions aim at achieving sustainable urban development, occur in urban contexts, or intervene at the local level for urban populations, the **Urban Development Technical Facility (UDTF)**, in the framework of DG INTPA's Green Deal Knowledge Hub, is now open to provide assistance to EU Delegations.

The UDTF can provide advice and support from the identification and formulation of projects, to assisting with the implementation of an Action. It offers expert advice (remote and/or in situ), conducts pre-feasibility studies, executes diagnostics, offers short-term support for decision-making processes, supports policy dialogue, and much more.

## How to use the UDTF?

The Facility is **demand-driven**, adapted for specialized, short-term **technical assistance** in virtually all fields of sustainable urban development. This includes, but is not limited to:

Sustainable & green urban development	Urban mobility
Housing & settlement development	Urban infrastructures & basic services
Urban economic development	Disaster Risk Reduction
Local revenues & municipal finance	Climate adaptation & mitigation
Solid waste management	Nature-based Solutions

The Facility is coordinated by three long-term key experts that are specialized in **Urban Finance**, **Green City Approaches** and **Urban Strategic Planning and Development**, complemented by the required expertise of short term experts and consortium members.
