

Climate Change Sector Reform Performance Contract in Ethiopia

Ethiopia is one of the most vulnerable countries to the impacts of climate change, with recurrent droughts, floods, and other extreme weather events. These shocks have a significant impact on food security, water resources, and livelihoods. To respond to these challenges, it is essential to promote sustainable development while building resilience to the impacts of climate change.

The project is critical for improving the institutional and policy frameworks for climate change, enhancing the capacity of stakeholders, and supporting the implementation of Ethiopia's Climate Resilient Green Economy (CRGE) strategy.

Duration: 2019 - 2023

Budget: €2,835,700

BENEFICIARIES

The Government of Ethiopia
Civil Society Organizations
Private sector
Vulnerable communities

Main Objective

Transform Ethiopia's economic structure towards a climate resilient and green economy

Specific Objectives

Improve climate change mitigation in forestry and industry sectors

Improve climate actions monitoring and climate integration in public finance

Outputs

Improved forest management and benefits, including enhancing forest conservation and afforestation and reducing deforestation

Improved energy efficiency, energy management and reduction of fossil fuels in cement industry

Strengthened federal and local government Monitoring, Reporting, Verification (MRV) actions, coordination and data/information flows

Strengthened governance and accountability in the change's public financial management sector
