WHAT IS CAPACITY4DEV?

It's the knowledge sharing platform for development professionals, managed by the European Commission's Directorate-General for International Partnerships (DG INTPA)

It connects development actors around the world so they can collaborate and exchange knowledge and lessons learnt about their activities.

Capacity4dev is the only collaborative platform where EU institutions staff and external stakeholders dealing with development can interact and work together.

The platform infrastructure is managed by the EC, respecting data privacy regulations and providing a secure IT environment.

HOW CAN CAPACITY4DEV SUPPORT YOU?

Collaborate in Groups
The 'Groups' feature offers a collaborative workspace, with various privacy settings. Create a Group on a thematic or geographical area - save documents, discuss with members, promote events - to foster collaboration with EU institutions Headquarters and Delegations, as well as implementing partners.

Give visibility through Projects
The 'Projects' feature allows you to share knowledge based on your experience and provides visibility to the projects and programmes you manage. Project pages will be publicly accessible, even after completion.

Use resources
Make use of essential horizontal tools and methodologies such as the **Team Europe Initiative and Joint Programming Tracker** or the **Results and Indicators for Development**.

Disseminate
Share best practices and tips for other development professionals by suggesting topics and projects for **articles** and possible social media dissemination.

Customise your notifications
Simply set your preferences to receive notifications about the topics and geographical areas you are particularly interested in. Join existing groups and take part in ongoing discussions on the themes that matter most to you.
