

POLIMP

Monitor

Issue 3. September 2015

POLIMP Monitor, issued twice a year for a three-year period (2014-16), aims at timely delivery of news and information outside the POLIMP activities which might be of interest to policymakers, stakeholders and interested citizens. Each issue offers a round-up of the previous six months' major developments with links to the full text of each corresponding news item, analysis or official document. These links are presented per topic. This overview is complemented by an editorial note that reports progress in POLIMP work to mobilise and transfer knowledge. In this way, POLIMP Monitor presents the latest development in POLIMP and external sources of information in a unique package to interested observers.

EDITORIAL

EU and UN policy options explained at POLIMP Climate Policy Info Hub

POLIMP is a project devoted to mobilizing and transferring knowledge on post-2012 climate policy implications, under the financial support of the 7th Framework Programme (FP7) of the European Union. The project's ultimate purpose is to support policy and decision makers in taking well-informed decisions, by facilitating understanding of the consequences of different policies and climate regimes, thereby reducing uncertainties and enhancing their insights.

One of POLIMP's main tasks is the identification of knowledge needs of different stakeholder groups within Europe regarding key topics of climate policy, followed by the consequent compilation of information packages from a multitude of information sources in order to address these needs. A stakeholders' consultation procedure, consisting of bilateral meetings, interviews with stakeholders, workshops and focused dialogue has led to the identification of knowledge gaps, as described in Monitor Series Issues 1 and 2.

Targeted at efficiently addressing these gaps and needs, POLIMP Consortium has been working on the collection and synthesis of knowledge from multidisciplinary sources, regarding possible climate policy directions and their implications. The synthesis procedure consisted of bringing together findings from a wide spectrum of scientific reports, climate policy analysis projects, legal studies, policy decisions and regulations, studies on existing and new market mechanisms, projects on international cooperation and technology transfer and discussion outcomes of climate negotiations. The valuable outcome was the transformation of scattered information into a series of structured, cohesive and inclusive knowledge packages, targeted to filling the knowledge needs in a specific form, tailor-made to the needs of the target audience.

These knowledge packages have been collected and are now hosted online at the new POLIMP online knowledge platform, launched in March 2015 called Climate Policy Info Hub, accessible at <http://climatepolicyinfohub.eu/>. This useful web-based tool serves as a knowledge base on climate change mitigation, adaptation, technology transfer, finance and market mechanisms, offering many functionalities to make exploration of

impacts and implications of international and EU climate policy as easy and accessible as possible for decision-makers in policy, business and civil society.

Knowledge packages at the Climate Policy Info Hub are thematically categorized under major Issues, such as Adaptation, Energy Efficiency, EU Climate Policy, International Climate Policy and Emission Trading. Further tagging is offered under specific Sectors, including Agriculture, Energy, Households, Industry and Transport. This structure of multi-level clustering of knowledge packages is designed in order to facilitate search and reveal links among different aspects of climate policy. A broad selection of Keywords is also available to enable visitors to track down specific knowledge packages according to their interests.

The Climate Policy Info Hub offers an attractive interface, with articles of high quality and journalistic style. Descriptive titles, to-the-point captions and clear illustrations support visitors in finding exactly what they are looking for. A full list of references and further reading suggestions at the end of each article, however, offer a lot more than a quick overview to those who wish to further elaborate on their subject of choice.

The constantly updated and enriched content renders the POLIMP Climate Policy Info Hub a living and active platform, oriented at reflecting latest knowledge and conveying it to users from the heart of climate policy negotiations.
