

Facilitating Sustainable Urban Development in the Partner Countries of the EU

How can the UDTF help you?

If your Actions aim at achieving sustainable urban development, occur in urban contexts, or intervene at the local level for urban populations, the **Urban Development Technical Facility (UDTF)**, in the framework of DG INTPA's Green Deal Knowledge Hub, is now open to provide assistance to EU Delegations.

The UDTF can provide advice and support from the identification and formulation of projects, to assisting with the implementation of an Action. It offers expert advice (remote and/or in situ), conducts pre-feasibility studies, executes diagnostics, offers short-term support for decision-making processes, supports policy dialogue, and much more.

How to use the UDTF?

The Facility is **demand-driven**, adapted for specialized, short-term **technical assistance** in virtually all fields of sustainable urban development. This includes, but is not limited to:

Sustainable and green urban development

Housing and settlement development

Urban economic development

Local revenues and municipal finance

Solid waste management

Urban mobility

Urban infrastructures and basic services

Disaster Risk Reduction

Climate adaptation and mitigation

Nature-based Solutions

The Facility is coordinated by a three long-term key experts:

Jacques-Emmanuel Remy
Team Lead and Key Expert for Urban Strategic Planning and Development

Eva Bufi del Pozo
Key Expert 2 – Urban Finance

Adriana Vega Sanchez
Key Expert 3 – Green City Approaches

It is complemented by a backstopping team and the required expertise of short term experts and consortium members.
