

# **EVALVOICES**

## FOR EVALUATORS BY EVALUATORS

30 SEPTEMBER 2025 |  
14:00 - 15:00 (CET)  
SESSION 02 |

## PROCESS TRAINING

### ABOUT THE WEBINAR

Process tracing is a qualitative research method used to identify and test causal mechanisms in complex contexts. It enables evaluators to go beyond “what works” by systematically examining how and why interventions produce outcomes.

In this session, Derek Beach will demonstrate how process tracing can be applied in evaluations to strengthen the credibility of findings and enhance understanding of causal pathways.

Participants will gain practical insights into designing and conducting evaluations that are both methodologically sound and contextually grounded.
