C1 LOCATION:

Our Project is located at Wenela Offices in Lilongwe. Currently, the project is being run with the involvement of ____ women.

The estimated number of women targeted once the project is fully operation shall not be less than 50. We'll need workers at the mines, factory and in our sales function.

C2 ROLE OF PARTNERS

We are still in the development stage of our business and we have thus chosen to pursue immediate targets e.g. acquisition/hire of Machinery. We have thus made a proposal to Technical Entrepreneurs' Vocational Training TEVET who are positive will sell us the Chalk making machine which they have in stock but not in use. We may engage available finances once an agreement has been reached.

C3 SUPPORT

We believe we are steadily moving toward implementation of our operation. We have deliberately avoided seeking too much outside assistance in order to appreciate our operation.

We have been assured of technical support from TEVET once our machinery proposal succeeds ie training and best practice

We are yet to approach financiers as our needs have not been budgeted.

C4 ASSISTANCE

At this stage we have received no financial support either technically or financially we believe the technical aspect is less challenging than the financial needs.

C5 MINISTRY OF TRADE AND INDUSTRY

We are receiving support from TEVET which is under the Ministry of Trade and Industry but this depended on whether our proposal for the purchase of the machinery is successful.

C6 FINANCIERS

We have not Approached any financiers yet as we await the drafting of more realistic budget proposal. We have resolved to put our immediate focus on the acquisition of thee chalk making machine as this is the only way that the project can make any financiers advances.

We will engage all possible financiers once we have a position from TEVET. This will give us an idea of whether to engage the financiers based on locally purchasing the machine or importing a similar machine from manufacturers-outside the country.
