# Introduction

The principles on which the general concept is based guarantee graphic coherence across all format types. These rules help ensure the harmonious combination of the charter's different elements, irrespective of the medium, at the same time leaving the graphic designer free to be creative.

The charter gives shape to the GCCA's desire to adopt a more personal and unique identity, made up of a series of elements that, when combined together and positioned in clearly identified places, bring coherence to all of the media used, beyond just the logo.

# Structure of the visual identity

## 1. Grid

### **The grid constitutes the foundation for the entire structure of the graphic**

**identity.** It is used for positioning all the graphic elements, such as headings, texts, photos, diagrams, tables and any other visual component, both on covers and inside pages of publications, as well as promotional materials and website banners.

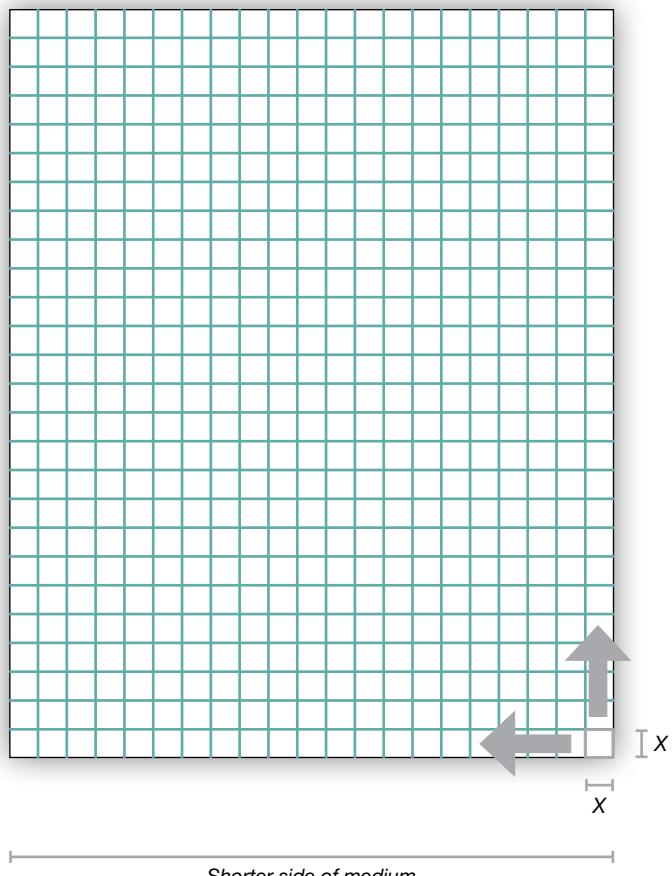

### **Constructing the grid**

To mark out the grid, divide the shorter side of the medium by 21. Then use the measurement obtained here on the other, longer side of the medium in order to create squares of the same size, starting from the lower right corner.

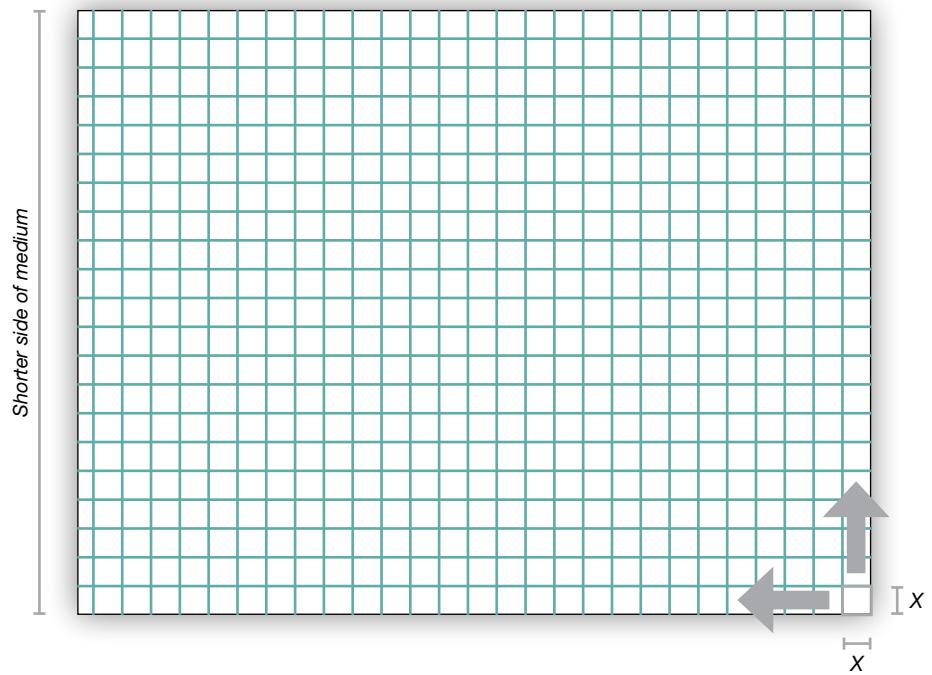

This grid also applies to the inside pages.

 = 1 grid square

Grid for vertical medium

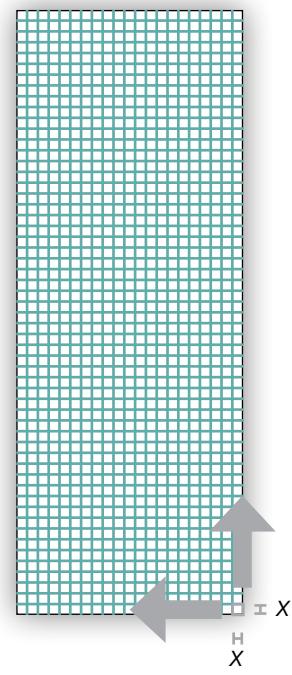

Grid for horizontal medium

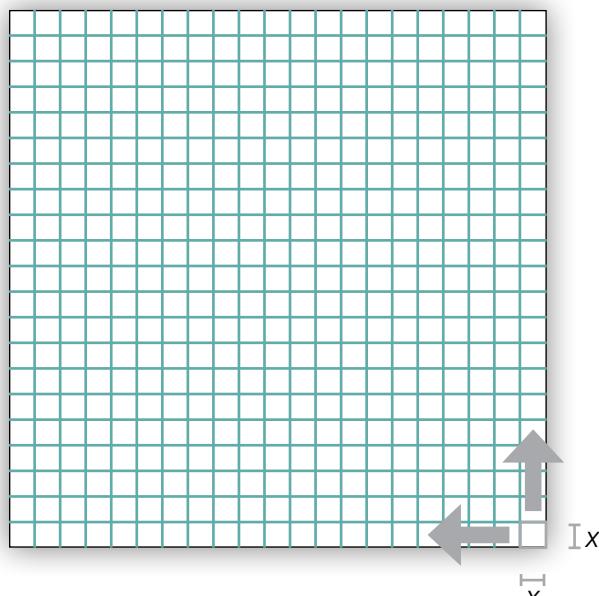

$X = 1/21 \text{ of the shorter side of the medium}$

Grid for narrow medium

$X = 1/21 \text{ of the shorter side of the medium}$

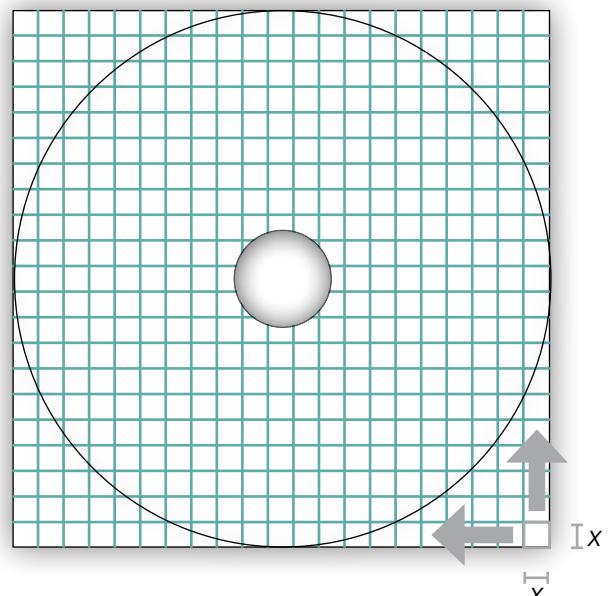

Grid for square medium

*Shorter side of medium*

*X = 1/21 of the shorter side of the medium*

Grid for round medium (CD, DVD, badge, etc.)

*Shorter side of medium*

*X = 1/21 of the shorter side of the medium*

## 2. Margins

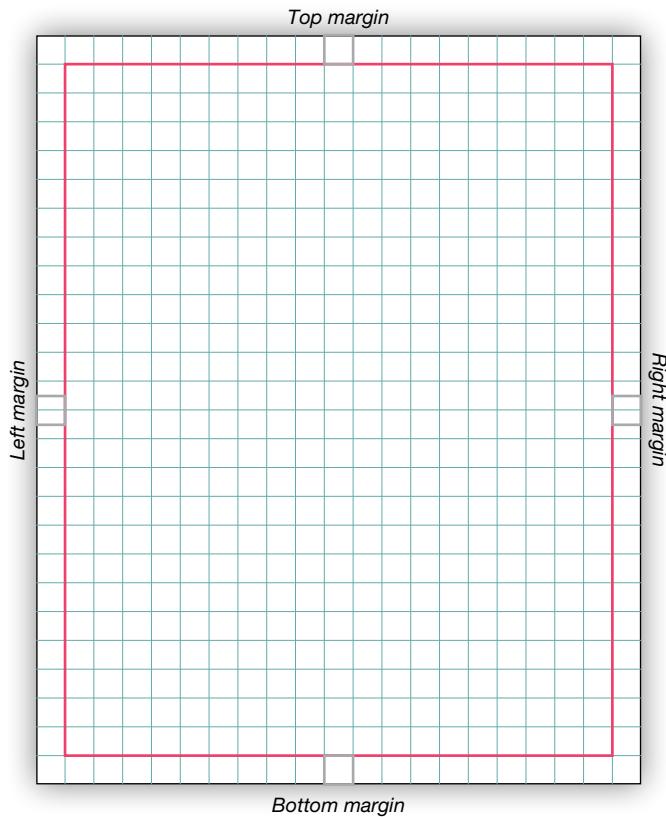

The margins determine the space used for positioning certain graphic elements and excluding others.

These margins vary according to the medium used.

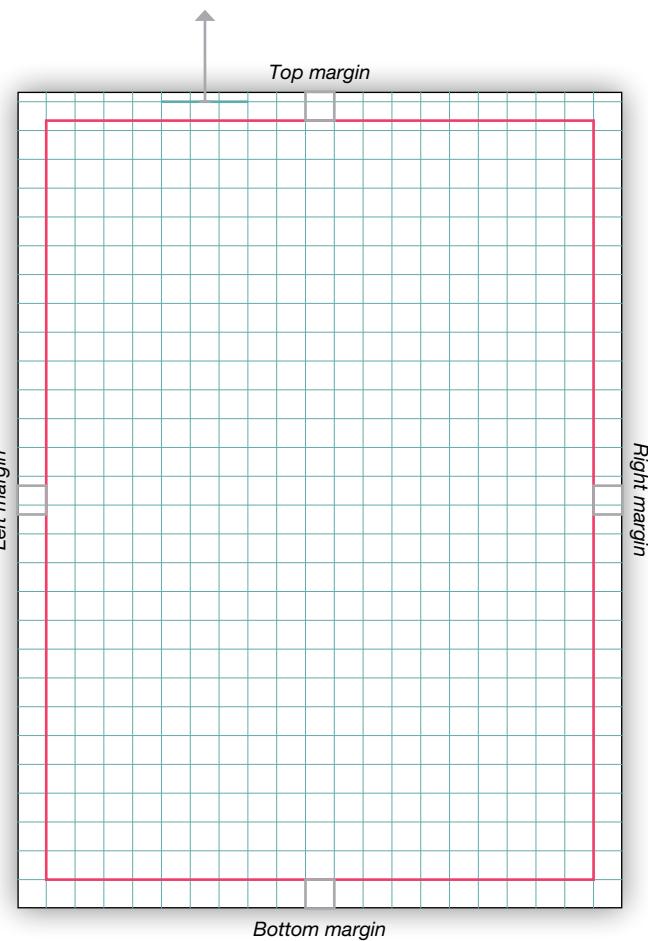

### Constructing the margins

The left, right, top and bottom margins must be **equivalent to one square of the grid**.

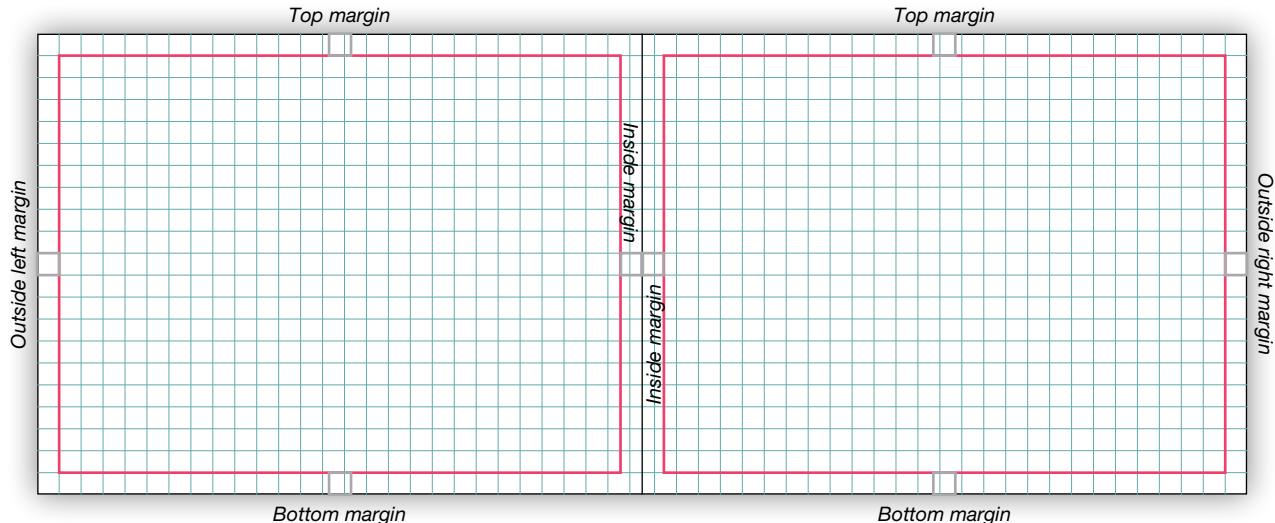

= 1 grid square

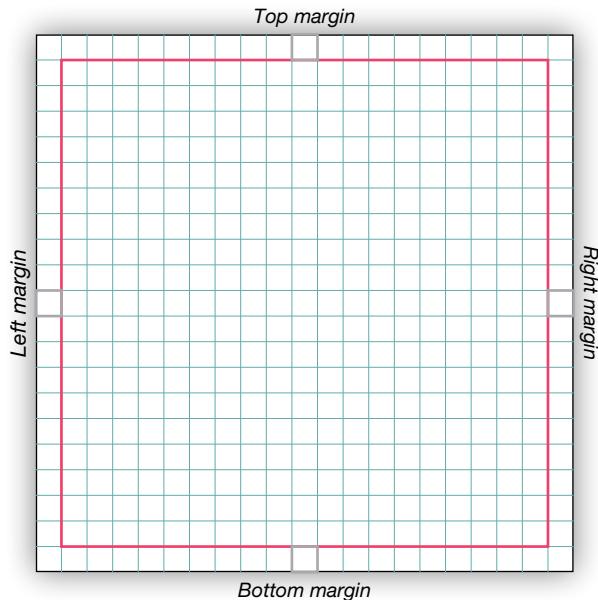

*Important: even if the grid does not fall exactly one square from the edge of the document, the margin still has to be the size of a grid square.*

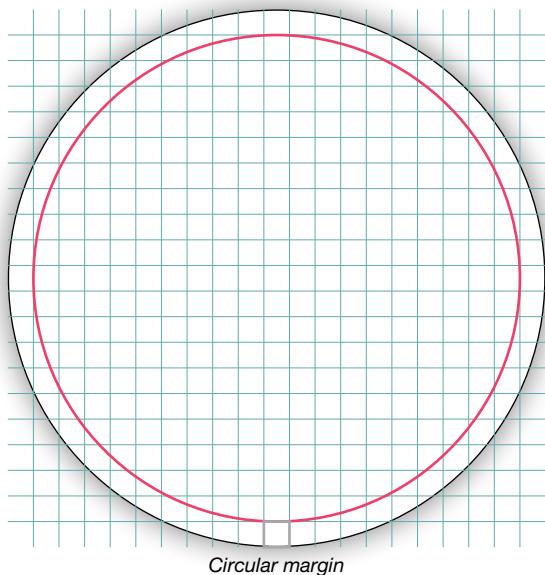

## Margins for horizontal double pages

## Margins for square medium

## Margin for round medium (CD, DVD, badge, etc.)

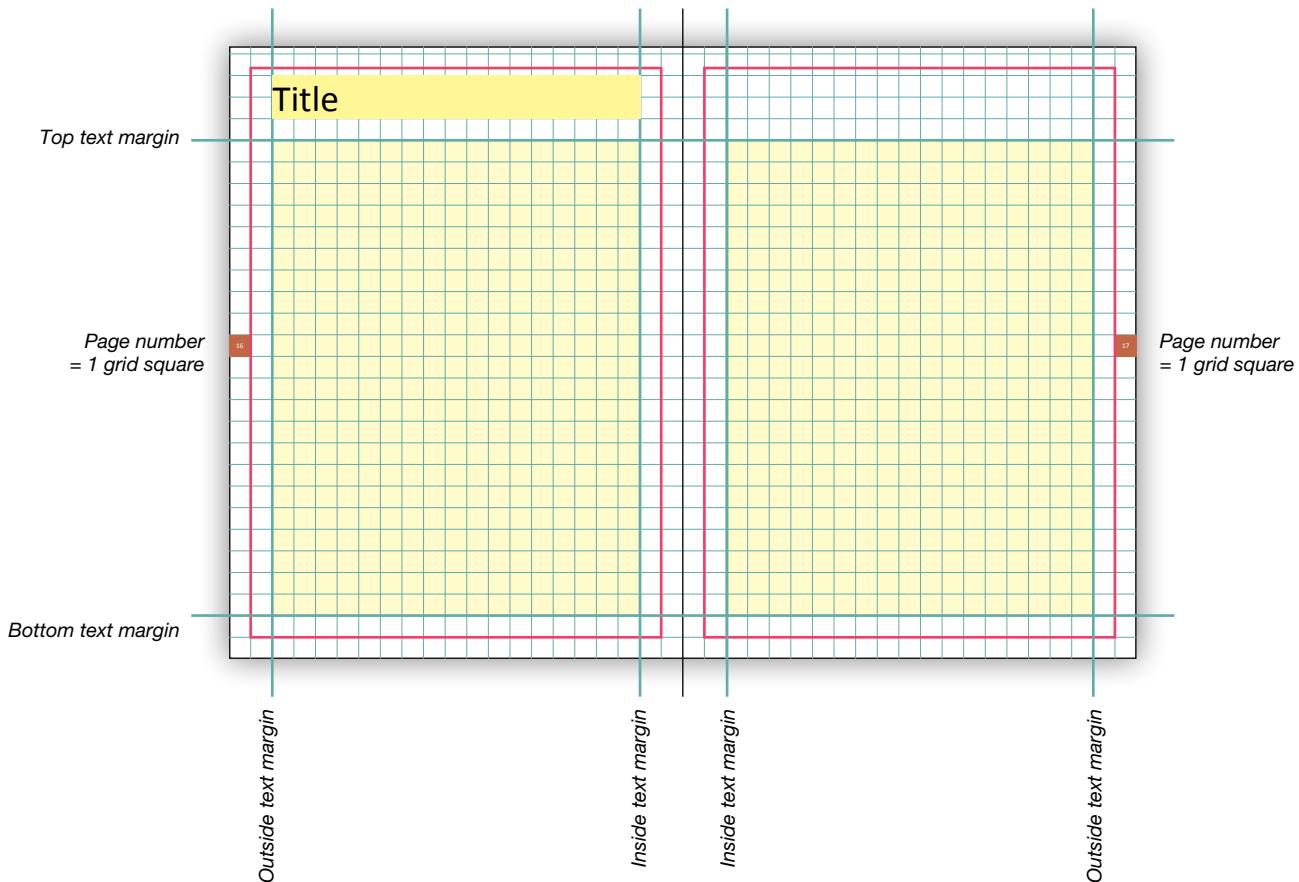

### 3. Text margins

The text must **fit inside a specific area**, within the 'text margins'.

The **top** text margin is equivalent to one grid square below the heading area.

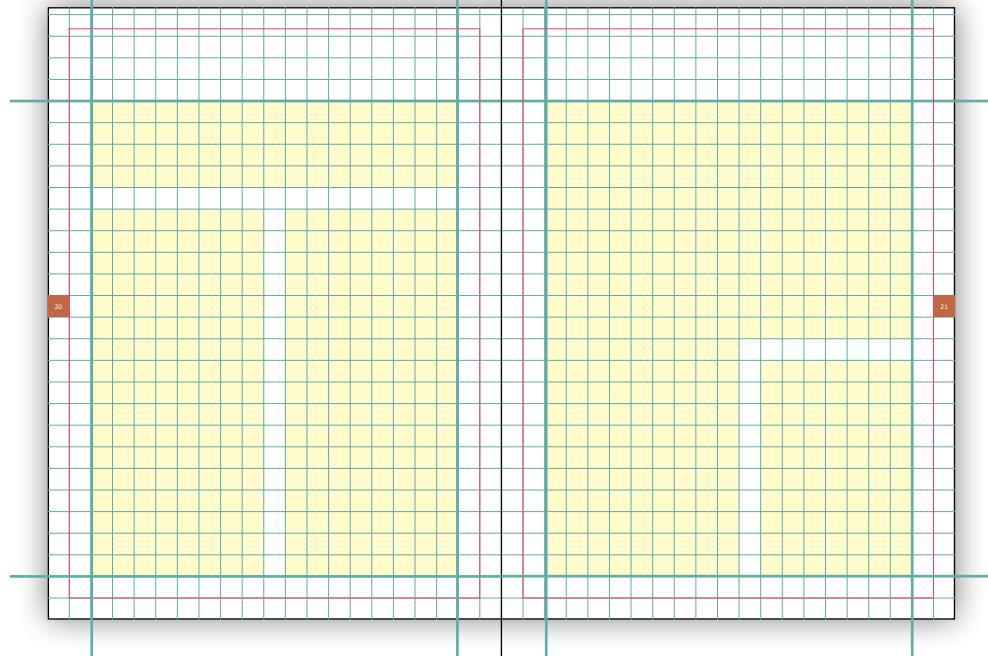

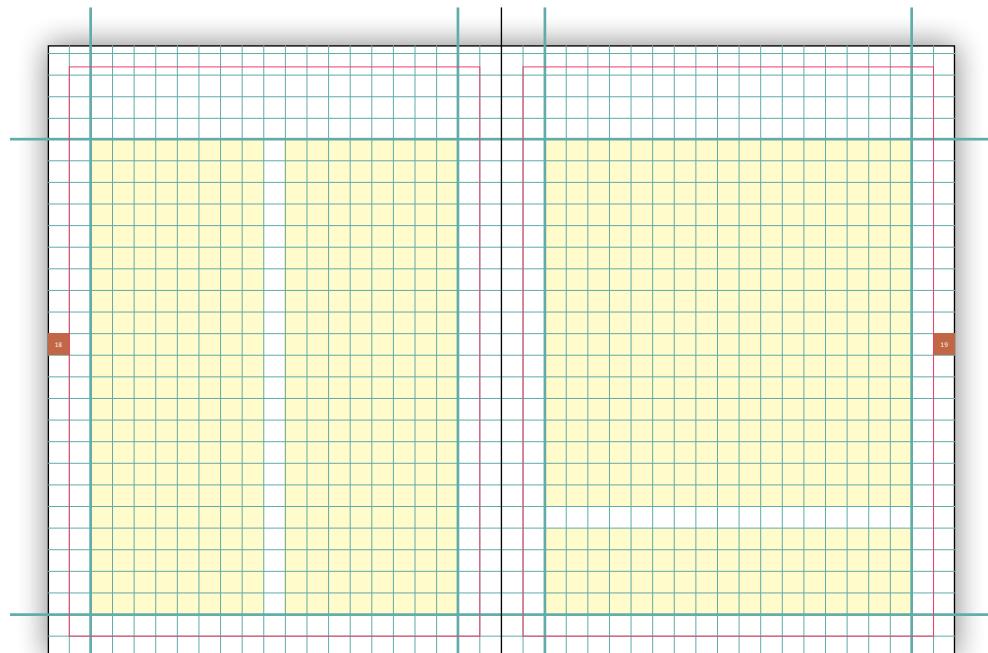

The **bottom** text margin corresponds to the bottom margin established when the document was created, but one grid square higher.

The **inside and outside** text margins are identical to the bottom margin established when the document was created, but one grid square further inwards.

The text columns can be placed freely within the 'text margins' but cannot under any circumstances go beyond the grid boundaries. The elements to take into account here are the width of the document, as well as the information (text) and other visuals (photos, illustrations, maps, tables, graphics, etc.) to be added in.

Gutter (space between two text columns)  
= 1 grid square.

## 4. Colour palette

	C	M	Y	K	Pantone	R	G	B	Web	
MAIN COLOURS										
	<b>Dark brown</b>	30	75	100	85	4625 C	48	20	0	#301400
	<b>Light ochre</b>	3	27	74	11	142 C	214	188	97	#d6bc61
These two main colours are the colours used for backgrounds. They must feature predominantly in all designs and products.										
SECONDARY COLOURS										
	<b>Bright yellow</b>	4	29	100	0	7408 C	228	196	38	#e4c426
	<b>Pale yellow</b>	0	0	52	0	602 C	253	249	165	#fdf9a5
	<b>Oak</b>	0	39	62	22	722 C	194	157	105	#c29d69
	<b>Orange</b>	0	49	100	7	144 C	210	153	37	#d29925
	<b>Medium ochre</b>	7	28	74	20	7407 C	195	173	91	#c3ad5b
	<b>Light brown</b>	29	73	100	64	732C	87	50	6	#573206

The secondary colours are used mainly for the broken line (see page 15).

They can also be used for other flat colours, but for areas that are smaller than those covered by the main colours.

		C	M	Y	K	Pantone	R	G	B	Web
TERTIARY COLOURS										
	<b>Sky blue</b>	63	17	0	8	542 C	131	168	214	83a8d6
	<b>Turquoise</b>	63	15	36	0	563 C	138	178	176	8ab2b0
	<b>Dark ochre</b>	0	50	100	40	139 C	156	113	18	9c7112
	<b>Brick</b>	0	76	87	30	1675 C	162	80	42	a2502a
	<b>Bordeaux</b>	0	67	42	64	499 C	110	62	63	6e3e3f
	<b>Olive green</b>	20	20	100	30	3985 C	167	159	30	a79F1e
	<b>Lemon green</b>	11	3	91	0	3945 C	234	231	67	eaе743
	<b>Forest green</b>	50	0	100	15	377 C	152	182	50	98b632

The tertiary colours can also be used for other flat colours but, again, only for areas that are smaller than those covered by the main and secondary colours. They will essentially be used for specifically identified themes or geographic zones.

## 5. Graphic elements

### Four plants and the frieze

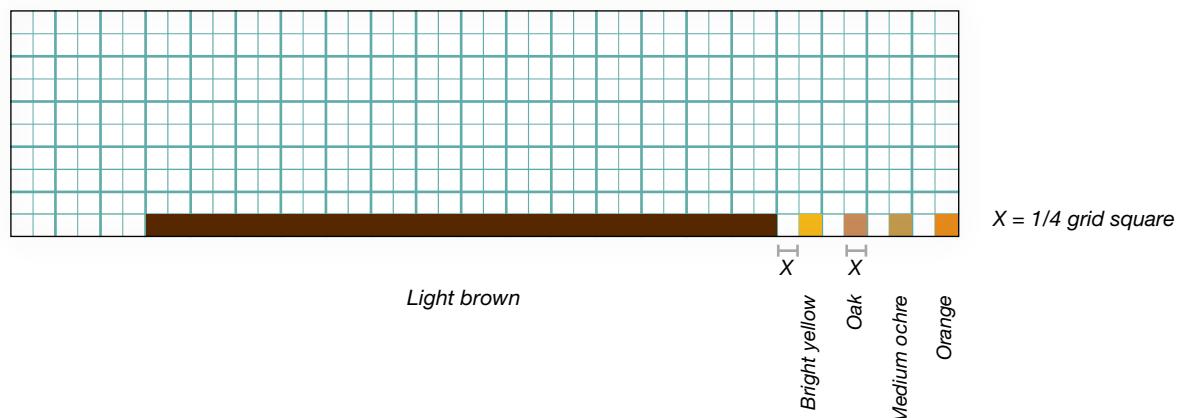

The plants and the frieze are independent elements that can be incorporated into the page layout in a harmonious and balanced way. Both the plants and the frieze are in white watermarks. The transparency is between 10 % and 40 %.

## Broken line

The rectangular broken line (and the four squares associated with it), symbolises the four geographic zones covered by the GCCA: the Caribbean, the Pacific, Asia and Africa. It is used on all communication media and is part of the basic identity, so therefore cannot be modified. The grid is divided into two so that the broken line can be added.

It will ALWAYS be positioned in the bottom right-hand corner of all documents.

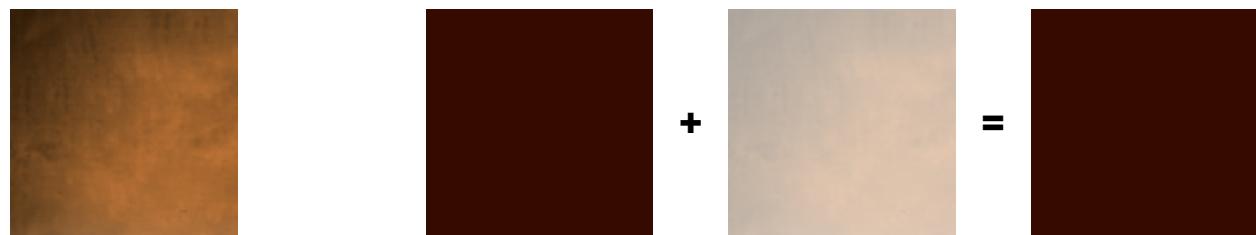

## Textured base

The textured base adds an element of depth, a 'matter' effect that brings out the notion of 'soil' in the general concept.

This base appears in a transparent manner on a colour background (most often dark brown).

The transparency percentage varies depending on the background colour chosen and the effect desired.

For the dark brown, for example, the textured background has 40% opacity.

*Textured background,  
100 % opacity*

*Applied dark brown*

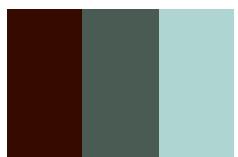

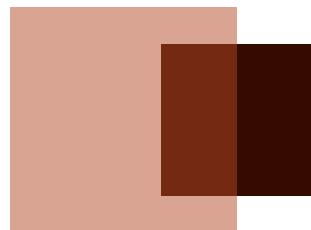

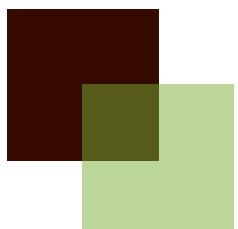

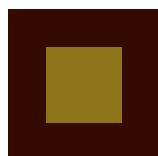

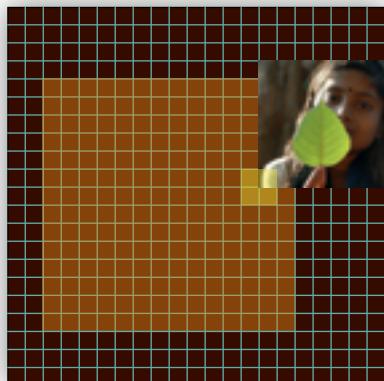

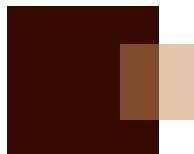

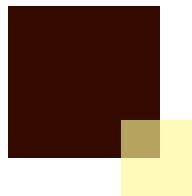

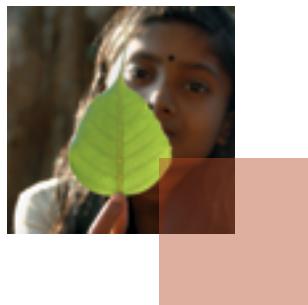

*Textured background,  
40 % opacity*

## Transparent square

The transparent square must always be aligned with the grid.

The opacity percentage depends on the colour selected from the colour palette.

It is possible to superimpose photos and flat colours (see page 31).

## 6. Photos

Photos are always placed in a square and aligned with the grid.

### Four base photos

To enhance its graphic identity, the GCCA has identified four images representing Asia, the Pacific, the Caribbean and Africa. Where necessary, these photos can be cropped for aesthetic purposes.

While it is possible to use other photos, they will still have to be four-colour in a warm colour range.

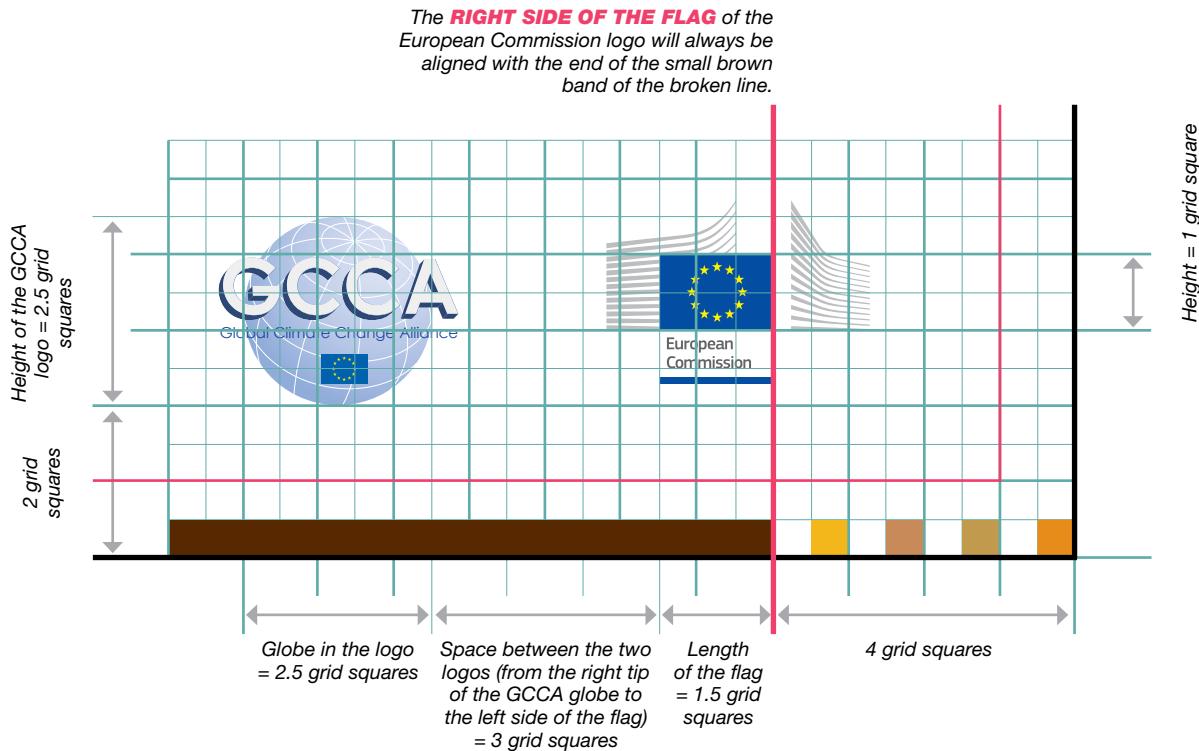

Where possible, you should avoid using a background that is white or too light, to ensure that the white outline remains visible.

The four base photos that now form the GCCA visual identity – along with other key visual elements – have been purchased on behalf of the GCCA via an online photo database (iStockphoto – [www.istockphoto.com](http://www.istockphoto.com)) each under standard with multi-seat licences. This means that the images have unlimited users, and this extended licence supplements the standard licensing terms and conditions that apply. These can be found at <http://www.istockphoto.com/help/licenses>. Users of this visual identity guide and associated templates are requested to refer to these conditions prior to the use of the images contained on the accompanying DVD to ensure that the standard licence conditions are not breached.

## 7. Logos

### Positioning the two logos

The grid is divided into two, so that the two logos and broken line can be correctly positioned.

### Minimum size of the GCCA logo

### Minimum size of the EC logo

Due to legibility and visibility constraints and in order to avoid the 'moiré' that could occur in halftone reproduction of the graphic element, the recommendation is not to reproduce any EC logo in a size smaller than 25 mm.

### Alternative uses of logo

When space is limited in terms of height (for example, USB keys, ballpoint pens, etc.), a horizontal version of the logo is available.

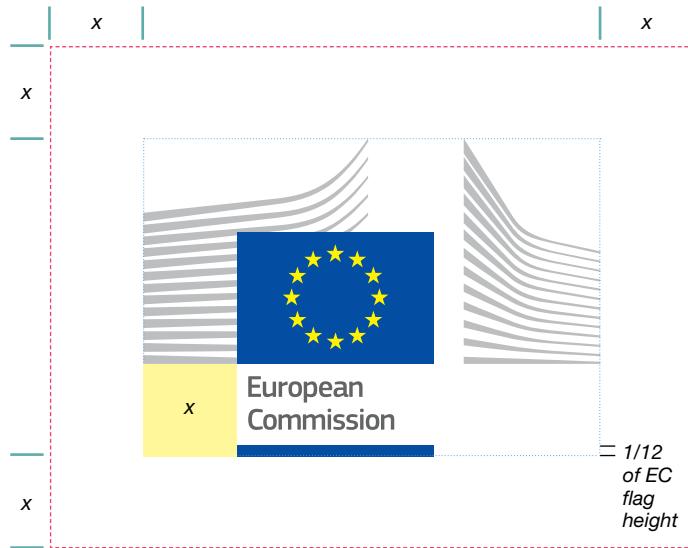

Positive version

Negative version

## Graphical placement of the EC logo

Protection area of logo: no images or typography allowed within these limits.

The only exception to this rule is business cards. Given their small size and the very limited space available, this 'protection area' rule cannot be followed.

The logo of the European Commission must be visible in its entirety and placed on a background which does not compromise its integrity. The logo is unalterable and inseparable in all its component elements. Modifying the logo in any way is strictly prohibited. For reasons of integrity and visibility, it should always be surrounded by a clear space, or 'protection area', which no other element (text, image, drawing, figure...) can infringe upon.

Placing the logo on a background which contains texture or graphical elements such as lines, shades, etc. can only be permitted if the visibility and integrity of the logo is not compromised and the protection area is respected. If the background would distort or interfere with the logo, the protection area around the logo should be white or marked with a flat colour.

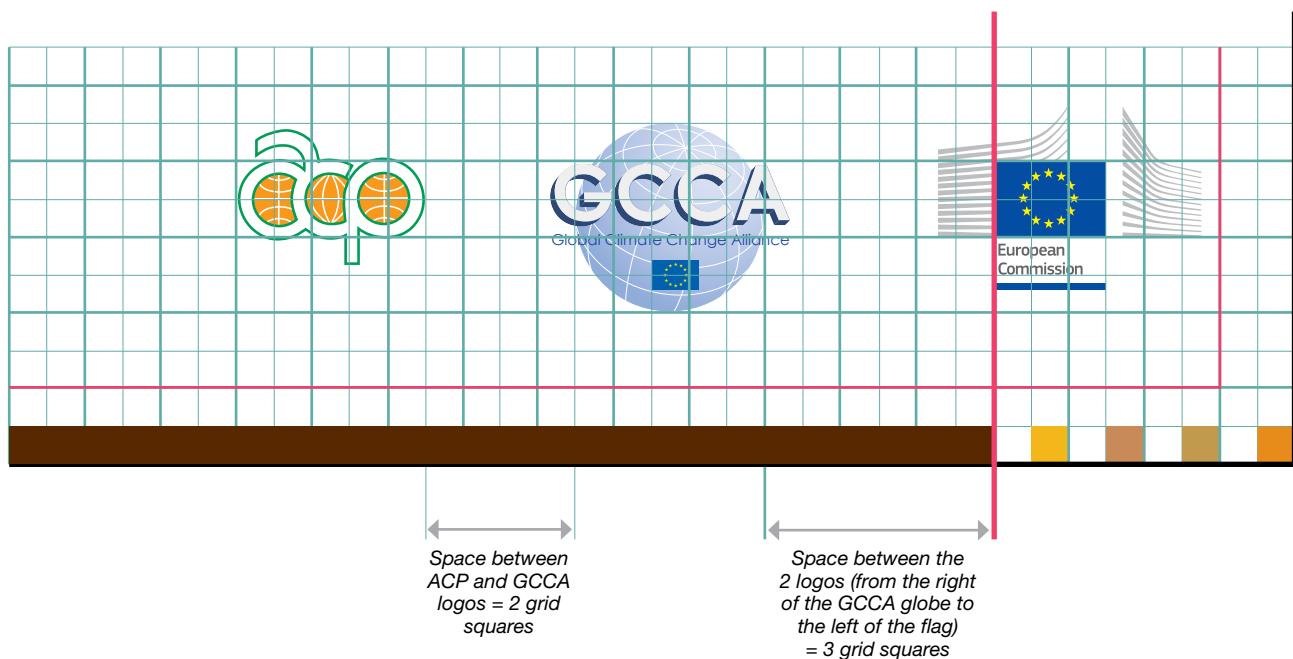

## Types of use of the EC logo by partner organisations

### Co-branding

Co-branding shall be used for products and activities in which the European Commission is involved as equal partner. For co-branding with external organisations' logos, make sure all logos have equal and balanced visual weight and align them with each other horizontally.

The Commission logo shall be placed along with the logos of other organisers and it should be proportionately the same size as the size of the logos of other organisations. The protocol order of the logos should be decided in each case as appropriate.

*The LEFT SIDE OF THE FLAG of the European Commission logo will always be aligned with the end of the small brown band of the broken line.*

The space between the 3 logos should be visibly equal.

In the case of the ACP logo, its height should correspond to 1 grid square.

Negative version

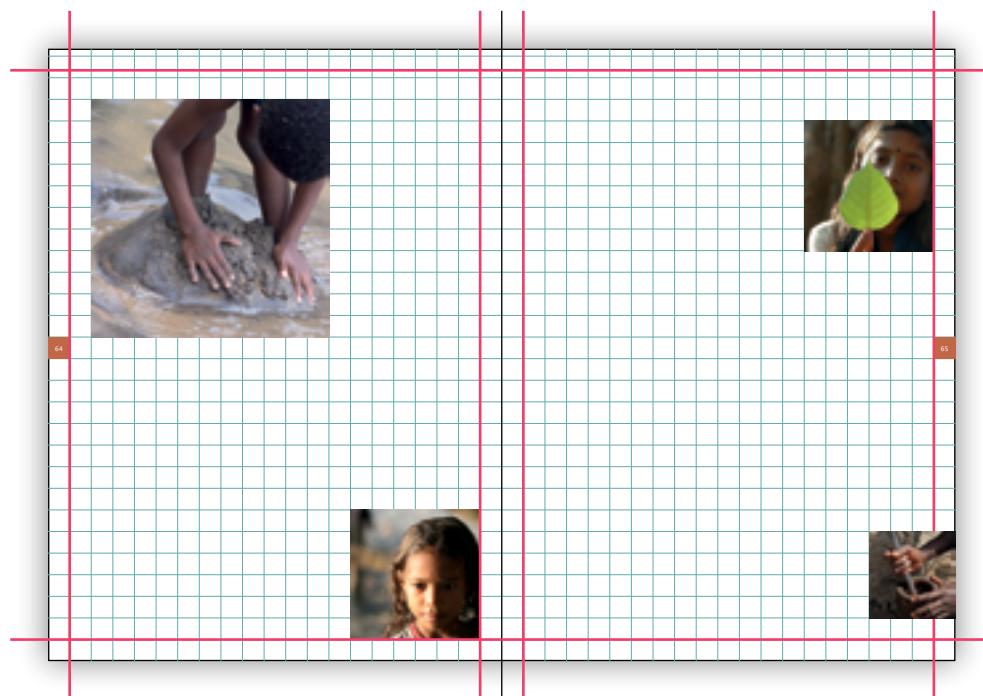

### Recommendations for use of logos by projects and programmes funded by the GCCA

Where projects and programmes funded by the GCCA are producing materials for their own use, in which the EC has had no editorial input, then this project / programme should revert to the latest edition of the EU Visibility Guidelines and available templates.

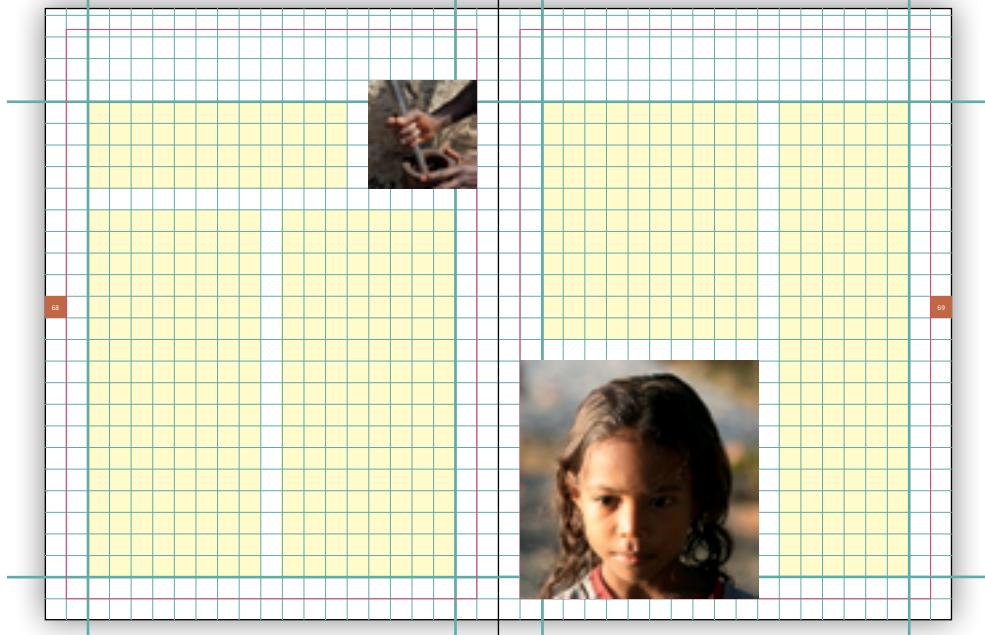

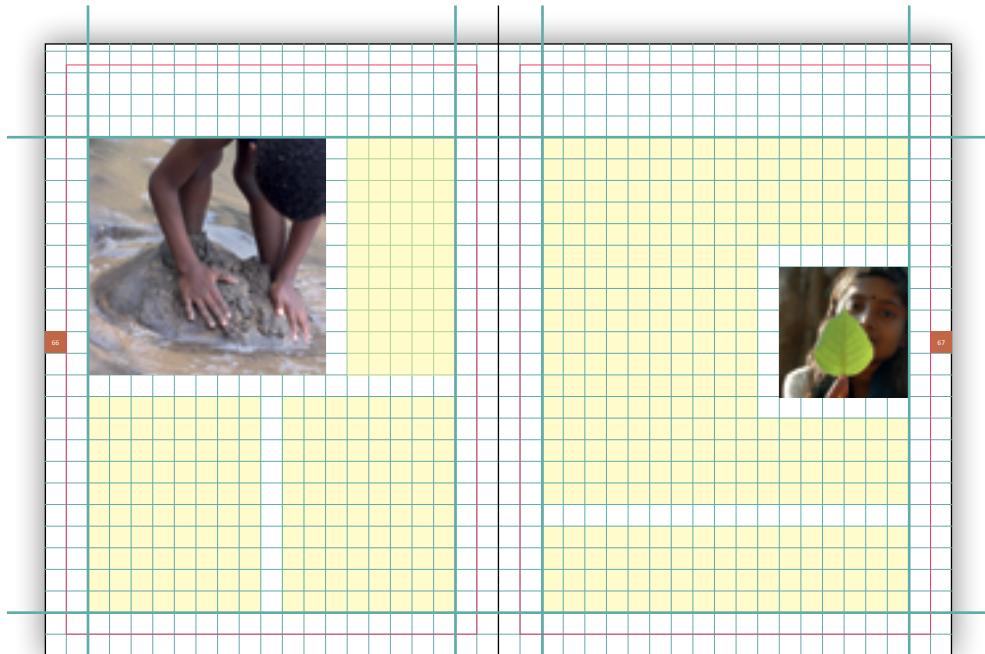

## 8. Positioning visuals on inside pages

The visuals can be placed freely inside or outside the margins (bleed).

However, they must be aligned with the grid and in square format.

The graphic designer is given a certain degree of freedom here, notably to act on his/her sensibility, when it comes to creating text areas, provided that the rules on document margins and text margins are followed.

## 9. Typography

### Helvetica Neue LT Pro

Helvetica is a so-called 'linear' font, meaning sans-serif. It was created in 1957 by Max Miedinger with the aim of successfully producing the most optical harmony possible, and is the symbol par excellence of Swiss typography. This font is highly legible due to its extremely neutral lines and is suitable for all uses, with the result that today it is still among the most widely used fonts worldwide, by both graphic designers and typographers.

**Using the Helvetica Neue LT Pro font is recommended for the text body and sub-headings, as well as for the name 'AMCC' used as a heading.**

For Word, PowerPoint and Excel documents, users of the GCCA Visual Identity also have the option of selecting the freely available ARIAL font as an alternative to this recommendation for the text body and sub-headings.

#### Weights

Only the following weights can be used: **Light, Roman, Bold, Heavy** and **Black**.

#### Italics

Italics have to be chosen from among the weights proposed.

Italics are used only to add meaning to the reading (citations, titles of works, foreign words, Latin scientific names, etc.).

Certain italic characters may also be required by the rules in the OPOCE's Interinstitutional Style Guide

(<http://publications.europa.eu/code/>).

They must never be used for the purposes of enhanced graphics.

On the cover, the URL **www.gcca.eu** will always appear in Helvetica Neue LT Pro Heavy Extended and is aligned at the bottom, on the broken line.

The use of spacing and kerning is permitted when it relates to justifying the text, provided it is managed correctly from a typographical point of view.

**Helvetica Neue LT Pro Roman**

**Helvetica Neue LT Pro Heavy Extended Italic**

abcdefghijklmnopqrstuvwxyz  
**BCDEFGHIJKLMNOPQRSTUVWXYZ**  
**1234567890 !"§\$%&/()=? @€**

## Calibri

Also belonging to the linear family, with its characteristic absence of serifs, the Calibri font was created for Microsoft by designer Lucas de Groot. It is one of the six fonts introduced with Windows Vista, replacing the Arial font. Calibri has also been introduced into Microsoft Office 2007 and 2010 as the default font. Among the six fonts of Windows Vista, Calibri is the closest to Lucida Sans and Lucida Grande, the default fonts in Mac OS X. It should be remembered that Windows has been using Lucida Sans Unicode since Windows NT 3.5 was launched.

In 2005, the Calibri font was awarded a prize at the annual Type Directors Club competition, in the category 'Type System'.

It combines characters from the Latin alphabet, Greek alphabet and Cyrillic alphabet.

**Using the Calibri font is recommended for headings, with the exception of the name 'AMCC' used as a heading (for which the Helvetica Neue LT Pro will be used).**

### Weights

Only the following weights can be used: **Regular** and **Bold**.

### Italics

The choice of italics is made from among the weights proposed.

Italics are used only to add meaning to the reading (citations, titles of works, foreign words, Latin scientific names, etc.).

Certain italic characters may also be required by the rules in the OPOCE's Interinstitutional Style Guide (<http://publications.europa.eu/code/>).

Italics must never be used for the purpose of enhanced graphics.

**What is the GCCA about?**

**PLATFORM FOR DIALOGUE AND EXCHANGE OF EXPERIENCES**

The GCCA fosters dialogue and exchange of experiences between the EU and developing countries on climate policy and on practical approaches to integrate climate change into their development processes through adaptation and mitigation. The results of the dialogue and exchange feed into the discussions on the new climate agreement under the UN Framework Convention on Climate Change (UNFCCC) and in the technical and financial cooperation supported by the three dialogue takes places at global, regional and national levels.

**What has been achieved to date?**

**TECHNICAL AND FINANCIAL COOPERATION**

The GCCA provides technical and financial support to targeted developing countries to integrate climate change into their development processes through adaptation and mitigation interventions.

The technical and financial cooperation in turn supports dialogue and exchange of experiences between the EU and partner countries.

In Brunei, the GCCA contributes €2 million to a €30 million programme to enhance climate capacity and resilience of the country to the effects of climate change and to build on existing strengths. The project has a strong emphasis on applying evidence-based decision-making to complement the strategic implementation of climate policies.

The GCCA currently has national programmes in more than 30 countries, including Bangladesh, Belize, Bolivia, Cambodia, Chile, Costa Rica, Ecuador, El Salvador, Maldives, Mali, Mauritius, Mozambique, Nepal, Papua New Guinea, Paraguay, Samoa, Solomon Islands, Sri Lanka, Thailand, Timor-Leste, Uganda, and Vanuatu. Additionally the GCCA is involved in regional programmes in Central America, the Caribbean and the Pacific through regional bodies. In these regions, the GCCA has committed to benefit from the UNFCCC Adaptation Fund and specific countries have been compensated by a series of workshops for developing climate adaptation plans and integrating climate change and adaptive capacity in the national development planning and budgeting.

Over the last three years, GCCA dialogue has also resulted in the development of a climate budget for finance from Estonia, to mainstream climate change into the budgeting process in developing countries through sector budget support. This will be achieved through the development of a INRI Climate Action Plan, the mainstreaming of the plan into budgets

11th Five Year Plan, and a strengthened institutional framework through, for example, an improved national climate monitoring system. An approach from Brunei highlights the importance of using common and nationally owned indicators and the value of connecting climate issues with regional environmental assistance.

In Gambia, the GCCA contributes €3.96 million to a €10 million programme to enhance the institutional capacities of the government to coordinate and implement climate change adaptation, mitigation, and support coastal adaptation to climate change. The project has benefited from continuing political, financial and technical support from the European Union and applied research to support mainstreaming and improved climate information systems.

In the Pacific, the GCCA contributes €8 million to a regional programme with the University of South Pacific to support climate change adaptation in Fiji, Kiribati, Marshall Islands, Micronesia, Nauru, Niue, Palau, Samoa, Tonga, Tuvalu and Vanuatu through capacity building through formal and informal training, on the ground assessments, and the development of climate adaptation synergies between these three components have contributed to the mainstreaming of climate change and adaptive capacity in the region.

In Brunei, the GCCA contributes €4.4 million, together with the Ministry of Finance and Budget from Estonia, to mainstream climate change into the budgeting process in developing countries through sector budget support. This will be achieved through the development of a INRI Climate Action Plan, the mainstreaming of the plan into budgets

**How does the GCCA complement other efforts?**

The GCCA cooperates with individual countries in Asia, Africa, the Caribbean, and the Pacific, as well as regional bodies such as the Secretariat of the Pacific Community, the Caribbean Forum, and the ACP Secretariat. Following the principles of aid effectiveness, the GCCA interventions are implemented in close coordination with and through national and regional institutions. The European Union, the United Nations Development Programme (UNDP), the United Nations Development Agency (UNDNA) in Mozambique, the UK Department for International Development (DFID) in Nepal, Germany, and the World Bank have also provided support to the GCCA in other areas and in the French Agency for Development (AFD) in the Central African Republic.

EU Member States are also invited to contribute financially to the GCCA. To date Ireland, Cyprus, Sweden, the Czech Republic, and Estonia have contributed a total of €57 million, of which €20 million was set-start finance.

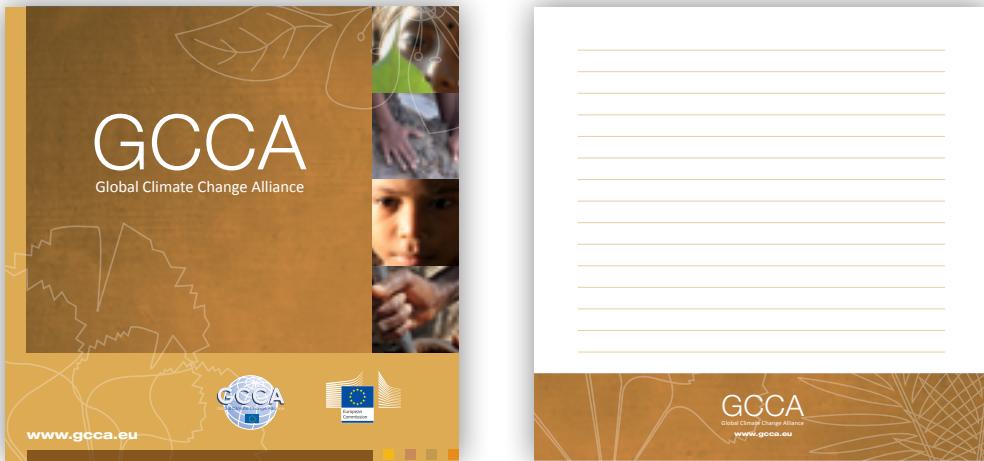

**MANAGING KNOWLEDGE AND PROMOTING LEARNING**

As experience accumulates across the globe, it is vital that the GCCA utilizes lesson learning as an integral part of the process. Therefore the Knowledge Management Strategy aims to create spaces, courses and regions with development partners. A number of specific tools and activities support this effort:

- A Knowledge Management and Communication Strategy and Work Plan was developed in a consultative manner in 2012.
- The First Knowledge Exchange Platform was held in Bonn in 2012, bringing together over 160 delegates to share experiences, network and look forward to the future of the GCCA.
- The GCCA organized side events at UNFCCC Conference of the Parties in Bonn, Cancún, Durban and Doha.
- The GCCA launched a Community of Practice on the EuropeAid platform capacity4development (<http://capacity4dev-europeaid.eu/gcca-community>)

# Things to exclude!

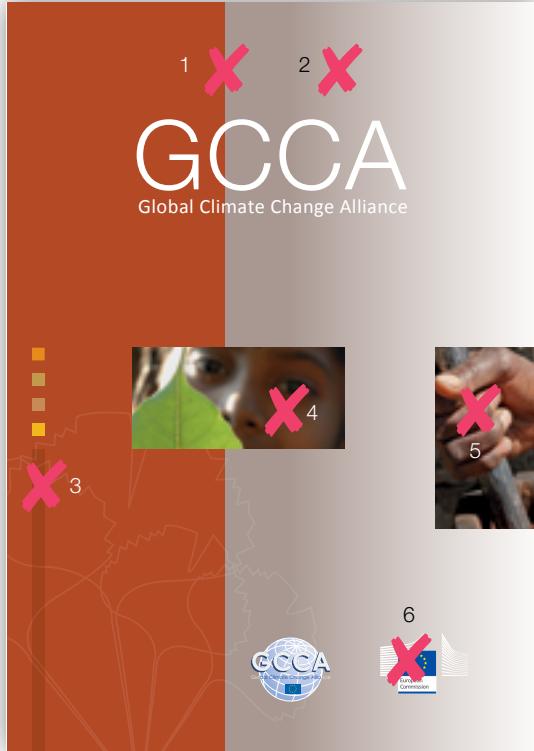

1. Do not add a white banner.
2. Do not use a background colour  
(only light ochre and dark brown are permitted).
3. Do not use a visual in a non-square format.
4. Do not position a logo in a way that does not comply  
with the graphic charter rules.
5. Comply with the colours of the broken line  
(see page 15).

1. Do not add a full-page photo.
2. Do not separate the GCCA and EC logos.
3. Do not change the broken line  
(stretch, enlarge, distort, etc.).

1. Do not position the logos in a way that does not comply with the graphic charter rules.
2. Use the Helvetica Neue LT Pro font for the heading 'GCCA' and align the sub-heading with this.
3. Do not use a background colour (only light ochre and dark brown are permitted).
4. Do not use a visual in a non-square format.
5. Comply with the colours established for the broken line (see page 15); do not superimpose the broken line on a visual.
6. Do not show 'www.gcca.eu' in a font other than Helvetica Neue LT Pro Heavy Extended.

1. Do not use a coloured background that isn't square.  
Do not use a rectangular coloured strip.
2. Do not use gradient.
3. Do not put the broken line in the wrong position.
- 4-5. Do not use a visual in a non-square format.
6. Do not use the logos in a version other than the positive version (risk of illegibility).

*Design and realisation*
