## Education

|     |                                   |
|-----|-----------------------------------|
| ALP | Accelerated Learning Centres      |
| ECD | Early Childhood Development       |
| EFA | Education For All                 |
| KEI | Key Education Indicator (for RtF) |
| MoE | Ministry of Education             |
| RtF | Rewrite the Future                |

## Health and HIV

|           |  |
|-----------|--|
| ACT       | Artemisinin - based combination treatment  |
| ARV / ART | Anti-Retroviral Treatment                  |
| CHC       | Community Health Committees                |
| CHW       | Community Health Workers                   |
| HBC       | Home Based Care                            |
| ITN       | Insecticide Treated Net                    |
| OVC       | Orphans and Vulnerable Children            |
| PLHIV     | People living with HIV                     |
| PMTCT     | Prevention of Mother to Child Transmission |
| SRH       | Sexual and Reproductive Health             |

## Hunger

|      |   |
|------|---|
| AS   | Anthropometric survey                       |
| BFH  | Baby Friendly Hospitals                     |
| CoD  | Cost of the Diet Assessment                 |
| HEA  | Household Economy Approach                  |
| IFE  | Infant Feeding in Emergencies               |
| IYCF | Infant and Young Child Feeding              |
| KAPB | Knowledge, Attitude, Practice and Behaviour |
| MUAC | Mid-Upper Arm Circumference                 |
| ORS  | Oral Rehydration Salts                      |
| TFC  | Treatment and Feeding Centre                |

# **A guidance note for developing monitoring and evaluation indicators for Child Protection, Education, Health & HIV, and Hunger Reduction projects and programmes**

## **Introduction**

This guidance is for Save the Children UK staff who are about to begin developing, or are in the process of refining, monitoring and evaluation (M&E) indicators for Child Protection, Education, Health & HIV, and Hunger Reduction programmes.

This guide should be useful for developing indicators and M&E plans for thematic programme plans (TPPs) and also for donor funding proposals.

The guide should complement local context and expertise. It provides good example indicators rather than a prescriptive list and does not cover indicators for every situation. The guide should be read alongside other SCUUK key programme guidance documents.

## **What you will be able to do once you have used this guidance**

1. Understand key M&E terms
2. Understand the difference between monitoring and evaluation
3. Understand why we need to monitor and evaluate
4. Understand the purpose of an M&E indicator
5. Understand the difference between output, outcome and impact indicators
6. Decide on the number of indicators to include in an M&E plan for your programme or project
7. Decide how to disaggregate the M&E indicators for your programme or project
8. Select outcome indicators for your programme or project

## **Development of this guidance**

This guide will continually develop as more good examples of indicators and data collection tools are added. If you have developed any indicators or tools which you think are useful and could be shared with others, please get in touch with the Learning and Impact Assessment (LIA) Advisers, as shown below.

Effective Programmes, LIA Adviser, Jo Feather ([j.feather@savethechildren.org.uk](mailto:j.feather@savethechildren.org.uk))  
Child Protection LIA Adviser, Sarah Lilley ([s.lilley@savethechildren.org.uk](mailto:s.lilley@savethechildren.org.uk))  
Education LIA Adviser, Dragana Sretenov ([d.sretenov@savethechildren.org.uk](mailto:d.sretenov@savethechildren.org.uk))

## 1. Terminology (what we call things)

The terms used in M&E can be confusing because they are used differently by different organisations and between donors (e.g. donors, NGOs, multilateral organisations – even within SC Alliance). For the purposes of this document, the following definitions apply:

Impact – final or longer term changes as a result of project or programme activities (e.g. changes in children’s development, well-being, experience of violence, fulfilment of rights). They may sometimes only be realised after the lifetime of a project or programme.

Objective – a specific, time bound and measurable goal for projects or programmes, which contributes to achieving the longer term aims (impact). Programme or project objectives should indicate what changes the project is hoping to achieve.

Outcome – the intermediate changes as a result of project or programme activities (e.g. changes in knowledge, behaviour, attitudes, children’s access and use of services, policy). Outcomes can usually be measured during the lifetime of a project or programme.

Output – the immediate results of project or programme activities (e.g. children receive training, community mechanisms are set up).

Input – the resources that SC uses (e.g. funds, staff, materials) and the activities that SC and its partners undertake (e.g. conducting a training workshop, meeting with communities, meeting with government officials, undertaking operational field research) to bring about a result.

Indicator – an objective way of measuring that progress is being achieved. Indicators can refer to each level: input, output, outcome, objective or impact. Indicators provide an indication that something has happened, or that an objective has been achieved.

Monitoring – the regular, routine tracking of data on a given indicator in order to detect changes over time. Monitoring tells us whether a project or programme is being implemented as planned and allows us to make improvements and changes.

Evaluation – the assessment of a project or programme at one point in time against its objectives (usually at the mid-point and at the end of the project), including unintended and negative changes. It can be carried out by someone internal to SC or by an external person and tells us whether the project or programme objectives have been achieved.

Impact Assessment – the assessment of the long-term and wide-ranging changes that a project or programme brings about, including unintended and negative changes. Impact assessment focuses on changes beyond those visible or achieved during the lifetime of most projects or programmes and is therefore usually undertaken some time after the project or programme implementation period.

### **Why monitor and evaluate?**

Monitoring and evaluation is important to:

- Keep track of programme quality;
- Develop on-going improvements to programme design;

- Ensure accountability to children and other stakeholders;
- Ensure accountability to donors;
- Identify the impact of the programme/project/ intervention;
- Identify and record lessons learnt;
- Help develop a useful evidence base on programme effectiveness; and
- Provide evidence base for advocacy activities.

### What are indicators?

An indicator is an objective way of measuring that progress is being achieved, through collecting factual information. Data collected about the indicator tells us if the expected change is happening i.e. it indicates or shows if change has happened.

#### Example of an indicator

A common activity in SC programmes is to conduct child rights training, and a frequently used output level monitoring indicator is the 'number of children who receive training on child rights'.

Taking an example of a 4-year programme with an activity target to conduct training with 5000 children by the end of a project:

- Before a project had started, we assume that no children have received training on child rights therefore the baseline for this indicator is 0.
- Data collected for the mid-point review of this project, found that 3,000 children had received training on child rights since the project started, therefore the value for this indicator is 3,000 at the mid-point.
- Data collected at the end of the four year programme, as part of the final evaluation, found that in total 5,500 children had received child rights training over the four years, therefore the final value of this indicator is 5,500.

The change in the value of the indicator from 0 children to 5,500 children by the end of the programme shows that the activity target to train 5000 children was achieved. Monitoring this **output indicator** at regular intervals allow us to check whether progress is on track.

Indicators are selected at the initial planning stage of a project or programme so that change can be measured from when implementation starts. The first set of data collected for each indicator at the start of a programme is called the **baseline**.

### Output, Outcome and Impact indicators

Achieving change for children is usually a long term process and can be monitored and evaluated on three levels ranging from output, to outcome, to impacts. We monitor and evaluate these different levels over time in order to learn about whether, and how, our interventions bring about change for children. **We always monitor at the output and outcome level**, but less commonly at the impact level, as final impact may not be achieved until after the lifetime of a project or programme.

Output indicators – measure the immediate results of project or programme activities and tell us if activities are happening as planned. Indicators that measure outputs are called 'output indicators' or 'process indicators'. These are quite straightforward to develop and therefore not covered further in this guidance note, beyond the examples given below. However, it is important to keep in mind that outputs and outcomes are different. Police participation in a child protection training workshop should encourage more effective and child-friendly working practices but we cannot assume that taking part in such activities automatically achieves this. Similarly,

training for teachers aimed at improving quality of teaching will not automatically lead to changes in classroom practices. In these examples of training workshops, the scheduling of such activities and the number of police/teachers participating would be considered outputs. **The outcomes would require appropriate assessment of whether police / teachers / health workers had changed their attitudes and working practice.**

### **Output/Process indicators**

*Example 1: Preventing and reducing exploitation of children working in mines in two districts in country x*

- Number of families participating in livelihood programme
- Number of children, parents and employers who participate in child labour awareness raising events, disaggregated by gender
- Number of active community based child protection mechanisms
- Number of labour inspectors trained on child rights, child labour and child friendly inspection

*Example 2: Increased primary enrolment for children from key target groups in 3 districts in country X*

- Number of teachers and school managers trained to facilitate access to education in the selected SC programme areas
- Number of families involved in activities carried out by SC and partners aimed at supporting the livelihoods of poor parents to facilitate access of their children to education
- Number of community groups formed to support the access to education for children from key target groups
- Number and type of measures introduced in partnership with the local authorities aimed at supporting the access and regular attendance of children from target groups

*Example 3: Increased uptake of health services at the community and district level*

- Number of health providers trained in xx
- Number of awareness raising sessions held at community level
- Number of people who have received information on available health services
- Number and type of different services available

*Example 4: Reduction of malnutrition in under 5s in programme areas*

- Number of families/ mothers and carers trained in appropriate feeding practices, breast and bottle feeding and solids
- Number of community support workers trained in infant feeding practices
- Number of therapeutic feeding centres established by SC or partners
- Evidence of referral system established by SC or partners

Outcome indicators – measure the intermediate changes as a result of the project or programme activities. Monitoring outcomes tells us if activities are bringing about the intended intermediate changes. In all programmes, there is likely to be a wide variety of outcomes that are expected, for example changes in community knowledge and attitudes, increased access to and utilisation of Protection, Education, Health & HIV, and Emergency services, increased quality of services, and changes in financing, policy or practice. These outcomes are expected to lead, in combination, to the final impact that is planned.

### **Outcome indicators**

*Example 1: Preventing and reducing exploitation of children working in mines in two districts in country x*

- % supported families who experience an increase in household income
- # and % of children, parents and employers who demonstrate a change in knowledge and attitudes towards child labour
- Number of children removed from hazardous child labour and enrolled in formal or informal education or vocational training, disaggregated by gender and age
- Evidence of whether or not labour inspectors are inspecting for child labour

*Example 2: Increased primary enrolment for children from key target groups in 3 districts in country X*

- # (and % if possible ) of new children enrolled in primary schools supported by SC, disaggregated by gender and key target groups
- % of students present in schools on a given number of days during the year to the # of children enrolled, disaggregated by gender and key target groups
- # of children enrolled from poor families financially supported by SC and partners, disaggregated by gender and key target groups
- Reasons given by children from key target groups who have never been to school for enrolling in schools for the first time, disaggregated by gender and key target groups

*Example 3: Increased uptake of health services at the community and district level*

- No and % (if possible) of new users accessing services at the health centre
- % of catchment population living within walking distance of health facility
- No of individual cases of malnutrition / pneumonia / diarrhoea/ malaria detected and treated
- No of respondents reporting satisfaction with health services provided

*Example 4: Reduction of malnutrition in under 5s in programme areas*

- No (and %) of infants (age) who received breast milk / solid/semi solid in previous 24 hours
- No (and %) of infants and children who had a minimum diversity and frequency diet in previous 24 hours
- No of children screened for Mid-Upper Arm Circumference (MUAC) and referred on for treatment
- No (and %) of reported incidence of diarrhoea

In Child Protection projects and programmes, impact indicators measure the extent to which child protection deficiencies or violations identified at the start of the project have been reduced and children's lives inside and outside project areas have been changed.

In Education projects and programmes, impact indicators measure the extent to which violations of children's rights to education and the lack of good quality services identified at the start of the project have been reduced, access and completion of inclusive quality basic education have been increased, and the longer term changes in the life of children and their communities have been influenced by our programme and advocacy activities.

In Health and HIV project and programmes, impact indicators measure the extent to which children survive and grow up healthy and have greater access to better quality of care.

In Hunger Reduction project and programmes, impact indicators measure the extent to which chronic and acute malnutrition has been reduced to ensure children are growing up free from hunger.

In some cases, anticipated impacts may occur during the lifetime of the programme and can be measured but in most cases they will take longer to be realised and will require a long term evaluation. Due to the short-term nature of emergency responses it is often not feasible to monitor impact level indicators. Where we do not have the resources to continue monitoring impact after the programme has finished it is important to choose indicators which **measure changes that we expect to occur during the lifetime of the programme.**

### **Impact indicators**

*Example 1: Preventing and reducing exploitation of children working in mines in two districts in a country*

- Number (%) of under-age children removed from child labour and enrolled in education, who remain out of hazardous work 18 months later and are mainstreamed into formal education, or have completed compulsory education
- Number (%) older children removed from child labour and enrolled in vocational training who are working successfully in marketable trades 18 months later
- % all children in two districts who are engaged in hazardous child labour, disaggregated by gender and age (overall incidence rate)

*Example 2: Increased primary enrolment for children from key target groups in 3 districts in country X*

- # of new entrants to primary grade 1 who are of the official primary school age as a proportion of the population of official entry grade in SC catchment areas 3 years latter, disaggregated by gender and key target groups
- Survival rate to grade 5, disaggregated by gender and key target groups
- # and % of children from key target groups, enrolled in schools at the beginning of the project, completing the full cycle of primary cycle, disaggregated by gender
- # and % of children enrolled in schools at the beginning of the project, transiting to the next level of education, disaggregated by gender and key target groups
- % of parents / community members reporting on new permanent education opportunities created for children from key target groups in SC programme areas

*Example 3: Increased uptake of health services at the community and district level*

- Decrease in incidence of illness and disease over time
- Increased skilled attendance at birth
- Reduced child and maternal morbidity /mortality in catchment areas

*Example 4: Reduction of malnutrition in under 5s in programme areas*

- Reduction in stunting among under 5s
- Reduction in global acute malnutrition in under 5s
- Reduction in severe acute malnutrition in under 5s

There is no strict rule about how many indicators should be used but there are a few issues to consider. We need to collect information for each indicator at least at the beginning and end of the programme, and probably more frequently (for education programmes most indicators need to be tracked at the beginning and end of each school year). So, it is advisable not to choose too many indicators that might require excessive work to collect. However, it is often the case that no single indicator can give a full picture of the change that is occurring, particularly where information is sensitive and difficult to collect reliably. Instead we often need to use more than one indicator, and a combination of quantitative and qualitative indicators, to provide an overall assessment. As a rough guide, **you should aim for around 10-15 outcome indicators for each thematic programme.**

### Disaggregating indicators

Disaggregation of indicators means checking for change in the value of an indicator for separate sub-groups of children, to make sure that all children are benefiting from a change. Disaggregation is important for assessing changes in equality and discrimination over time, and for understanding which children are being included or excluded in the benefits of a programme, to inform programmatic design.

The key issues that we are likely to need to disaggregate by are given in the table below:

| <b>Category for disaggregation</b>             |
|--|
| Sex (boys and girls)                           |
| Age (e.g. under five, adolescents)             |
| Disability status                              |
| Ethnic group                                   |
| Migrant status                                 |
| Single orphan, double orphan, not an orphan    |
| Living in a child-headed household             |
| Living in, or coming from, rural or urban area |
| Children affected by conflict/disaster         |
| Poverty status                                 |

Decisions about which other issues to focus on for disaggregation can be guided by evidence in the CRSA.

In order to disaggregate indicators, we may need to collect and record data on the relevant characteristics of a child. For example, in a survey we would ask each child surveyed for his/her age, gender, ethnic group and other demographic characteristics where this is culturally appropriate and safe.

## **Content of the rest of this guidance**

The rest of this guidance is divided into four thematic sections:

Child Protection  
Education  
Health and HIV  
Hunger Reduction

- Each section starts with an overview of expected outcomes for the specific projects and programmes.
- It then presents a detailed table of outcome indicators for each specific outcome.
- It finishes with some good practice examples of impact indicators.

## **How to select indicators**

The strategy for selecting indicators should be based on what we are trying to measure i.e. the project or programme rationale and logic, activities and objectives. It is therefore very important for monitoring and evaluation that each programme has a clear proposal for how inputs and activities will lead to expected outputs, outcomes and final impacts, before developing indicators.

The following sections provide a long list of indicators for each of the four thematic areas. The suggested method for using these sections to develop indicators is:

Step 1: Identify your project or programme objectives and outcomes

Step 2: Match the outcomes that you have identified with the outcomes in the first column of the indicator table

Step 3: Review the indicators suggested for each outcome in the indicator table

Step 4: Either –

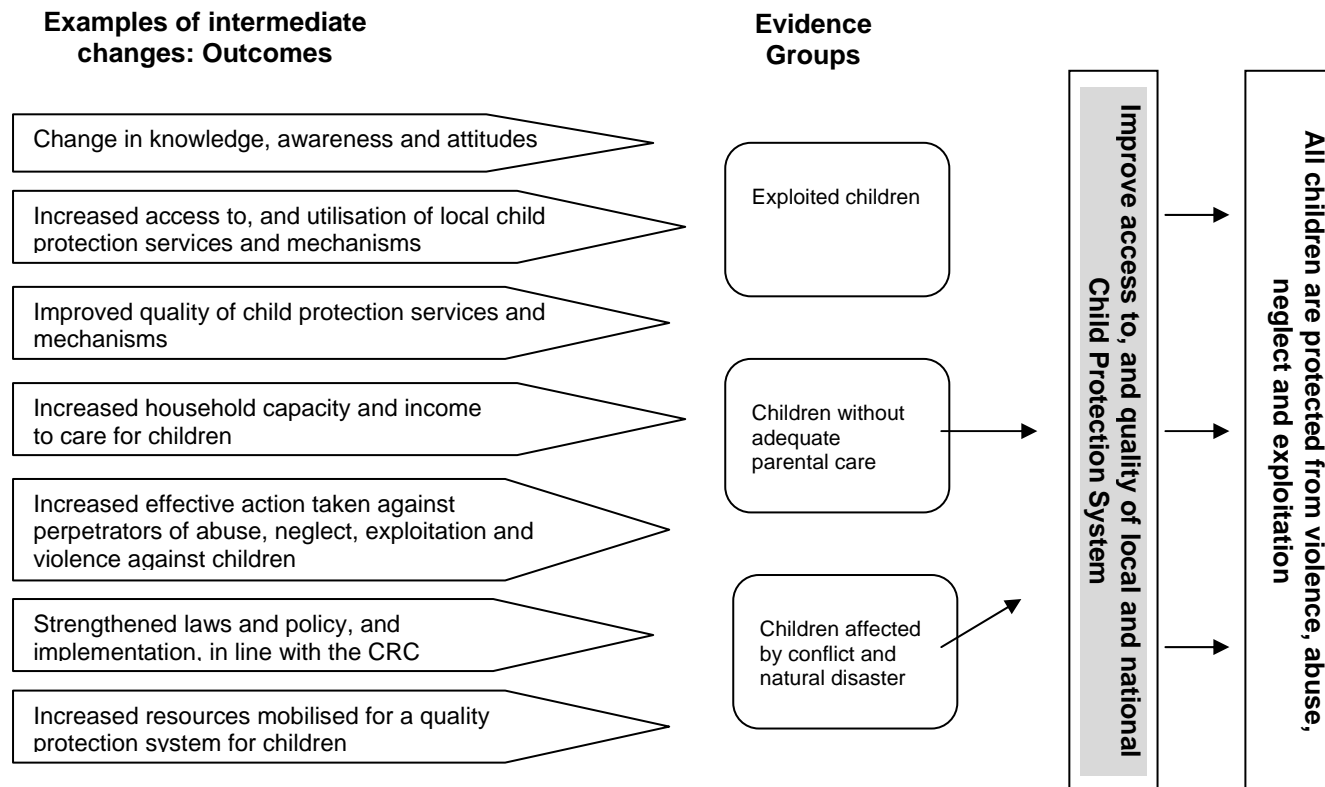

- Select one of the indicators suggested in the table for each specific outcome; or
- Develop your own indicator, using the suggested indicators as a guide.

Every project or programme is different, with different activities and objectives. Therefore there is no universal framework of indicators. Indicators should always be developed to be locally relevant, drawing on this guidance where helpful.

## CHILD PROTECTION

All SC UK Child Protection programmes have an overarching objective to improve access to, and quality of local and national child protection systems. This objective contributes to fulfilling all children's right to protection from abuse, neglect, violence and exploitation. In order to achieve this overarching objective, there are a number of outcomes which a programme may aim to directly achieve.

The diagram below provides some examples of outcomes which child protection programmes may be aiming to bring about, through the three pillars of child rights programming. Many of these outcomes are the same for each of our evidence groups and most are also relevant for both development and emergency interventions.

## Examples of outcome indicators

The diagram lists some of the broad outcomes which a child protection programme might aim to bring about. The table below gives examples of specific outcomes for each of the protection evidence groups (column 1) and suggests indicators with which to measure these (column 2). For each specific outcome, a number of alternative indicators are suggested. It also sets out:

1. The indicator's relevancy to the three Child Rights programming pillars and programming principles (column 3);
2. Suggestions for data collection methods that could be used to generate each indicator (column 4);
3. General comments on the indicator including where it has been used before (column 5); and
4. An indication of whether the indicator can be usefully applied in development and emergency contexts (columns 6 and 7).

The indicators are grouped by broad outcomes rather than by the evidence groups to emphasise the importance of holistic national child protection systems.

Whilst this section gives examples of a large number of indicators it is not exhaustive. This section of the guidance will be updated as more good examples are developed.

| Example of expected outcome as a result of child protection programme or emergency intervention     | Example of indicator to measure change   | Relevancy to Child Rights pillar and principles | Possible data collection methods   | Comment  | Apply to Development | Apply to Emergency |
|---|--|---|--|--|----------------------|--------------------|
| <b>Change in knowledge, awareness and attitudes</b>   |  |   |  |  |                      |                    |
| Increase in community knowledge around risks of migration and trafficking and how to migrate safely | # and % of children and parents who demonstrate increased knowledge in transit and destination areas of trafficking risks (e.g. main purpose for child trafficking and ways in which children are recruited) | Pillar 1 & 3<br>Principle 2                     | Survey of children and adults' knowledge, attitudes and practice. Undertaken before the awareness raising activities take place and then again after (e.g. at the end of training day or 1 month later). Survey can be conducted | This set of indicators monitors the effectiveness of awareness raising activities on child trafficking | Y                    | Y                  |
|   | # and % children and parents who demonstrate increased knowledge of safe migration and precautionary actions for migration (e.g. investigating legitimacy of job offers)                                     |   |  |  | Y                    | Y                  |

|   |  |                                     |  |   |                            |                            |
|---|--|-------------------------------------|--|---|----------------------------|----------------------------|
|   | <p># and % of children and adults who demonstrate increased awareness of the services available for those at risk of trafficking e.g. anti-trafficking committee, trafficking telephone helpline</p> <p>% target population who know about penalties for trafficking</p> <p># information requests to community based mechanisms, centres or telephone lines on safe migration</p> |                                     | <p>through group exercises with randomly selected children and adults</p> <p>Activity records from community group, centre or telephone line.</p>  |   | <p>Y</p> <p>Y</p> <p>Y</p> | <p>Y</p> <p>Y</p> <p>N</p> |
| <p>Increased community knowledge around risks of child labour</p>                                       | <p># and % of children, adults and employers who demonstrate increased knowledge and changed attitudes towards under-age or hazardous child labour</p> <p>% working children supported by SC who understand their rights to be protected from the worst forms of child labour and their legal position</p>   | <p>Pillar 1 &amp; 3 Principle 2</p> | <p>Survey of children and adults' knowledge, attitudes and practice. Undertaken before the awareness raising activities take place and then again after (e.g. at the end of training day or 1 month later). Survey can be conducted through group exercises with randomly selected children and adults</p> | <p>This set of indicators monitors the effectiveness of awareness raising activities on child labour</p>          | <p>Y</p> <p>Y</p>          | <p>Y</p> <p>N</p>          |
| <p>Increased number of children and adults understand the protection risks in their local community</p> | <p># and % children and adults who can identify key protection risks in their community</p>  | <p>Pillar 1 &amp; 3 Principle 2</p> | <p>Survey of children and adults' knowledge, attitudes and practice. Undertaken before the awareness raising activities take place and then again after (e.g. at the end of training day or 1 month later). Survey can be conducted</p>  | <p>This set of indicators monitors the effectiveness of general child protection awareness raising activities</p> | <p>Y</p>                   | <p>Y</p>                   |

|   |  |                                 |  |  |   |   |
|---|--|---------------------------------|--|--|---|---|
|   |  |                                 | through group exercises with randomly selected children and adults   |  |   |   |
| Increased number of children and adults know when, where and how to access help when a child is affected by a protection issue    | <p>Number (%) children who can identify someone to go to if they have a protection concern</p> <p>% target children and community who know where and how to formally report a protection violation</p> <p>% target children who are aware of the local child protection committee and any local services</p> | Pillar 1 & 3<br>Principle 2     | <p>Survey of children and adults' knowledge. Undertaken before the awareness raising activities take place and then again after (e.g. at the end of training day or 1 month later). Survey can be conducted through group exercises with randomly selected children and adults</p> | This set of indicators monitors the effectiveness of child protection awareness raising activities                   | Y | Y |
| Improved community attitudes towards child protection issues e.g. child labour, early marriage, child witchcraft, girls' role etc | Children's views on whether adults and community members have improved attitudes towards child protection issues   | Pillar 1 & 3<br>Principle 2 & 3 | <p>Survey of children and adults' knowledge. Undertaken before the awareness raising activities take place and then again after (e.g. at the end of training day or 1 month later). Survey can be conducted through group exercises with randomly selected children and adults</p> | This set of indicators monitors the effectiveness of child protection awareness raising and sensitisation activities | Y | Y |
| Improved children's knowledge and life skills   | <p>% children in SC supported communities who know how to protect themselves from HIV AIDS</p> <p>% children in SC supported communities who demonstrate an</p>  | Pillar 1 & 3<br>Principle 2     | <p>Survey of children and adults' knowledge. Undertaken before</p>   | This set of indicators monitors the effectiveness  | Y | Y |

|   |  |                          |   |   |   |   |

## Examples of impact indicators

Impact indicators measure the long term and wider changes as a result of a protection programme. They are usually monitored after the project or programme has finished. For many programmes, it will be adequate to monitor at the outcome level. In some cases, where we are piloting a new and untested interventions, we should aim to monitor at the impact level. This section gives a small number of good examples of impact indicators for each evidence group. For further advice on impact indicators or undertaking impact assessments, please contact the child protection LIA Adviser.

### Exploited children

#### *Long term impacts on supported children*

- % under-age working children removed from labour who are mainstreamed into formal education or have completed compulsory education at follow-up (e.g. 18 months later)
- % legal age working children removed from hazardous labour and enrolled in vocational training who are working successfully in marketable trades at follow-up (e.g. 18 months later)
- % working children removed from child labour whose siblings are also not working at follow-up (e.g. 18 months later)
- % working children who report a sustained improvement in working conditions
- % children reintegrated from trafficking who are enrolled in education or engaged in local work at follow-up (e.g. 18 months later)

#### *Wider impacts at local and national level*

- # & % children in SC operational area/across child national population engaged in under-age or hazardous child labour (incidence rate)
- # incidents of child trafficking in SC operational area/across child population (incidence rate)
- # villages/districts outside SC operational areas that are free from trafficking

### Children without adequate parental care

#### *Long term impacts on supported children*

- % children reintegrated into community placements supported by SC, who are still in a community-based care placement at follow up (e.g. 18 months later)
- % children reintegrated into community placements supported by SC, who are receiving better care and access to services than in the residential care institution
- % children in identified families that are adequately fed, clothed and cared for at follow-up (e.g. 18 months later)

*Wider impacts at local and national level*

- # children in SC operational areas/across child population in residential care institutions (incidence rate)
- # children in SC operational areas/across child population in alternative care placements
- % children in residential care institutions in SC operational areas/across child population who have 1 or more living parents (who are not there for reasons of family abuse or neglect)
- # children in SC supported areas/across child population accused of witchcraft (incidence rate)

Children affected by conflict and natural disasters

*Long term impact on supported children*

- % reintegrated children supported by SC who demonstrate an improvement in their well-being
- % reintegrated children supported by SC who are still in the community and engaged in education, training or positive employment at follow-up (e.g. 18 months after reintegration)

*Wider impacts at local and national level*

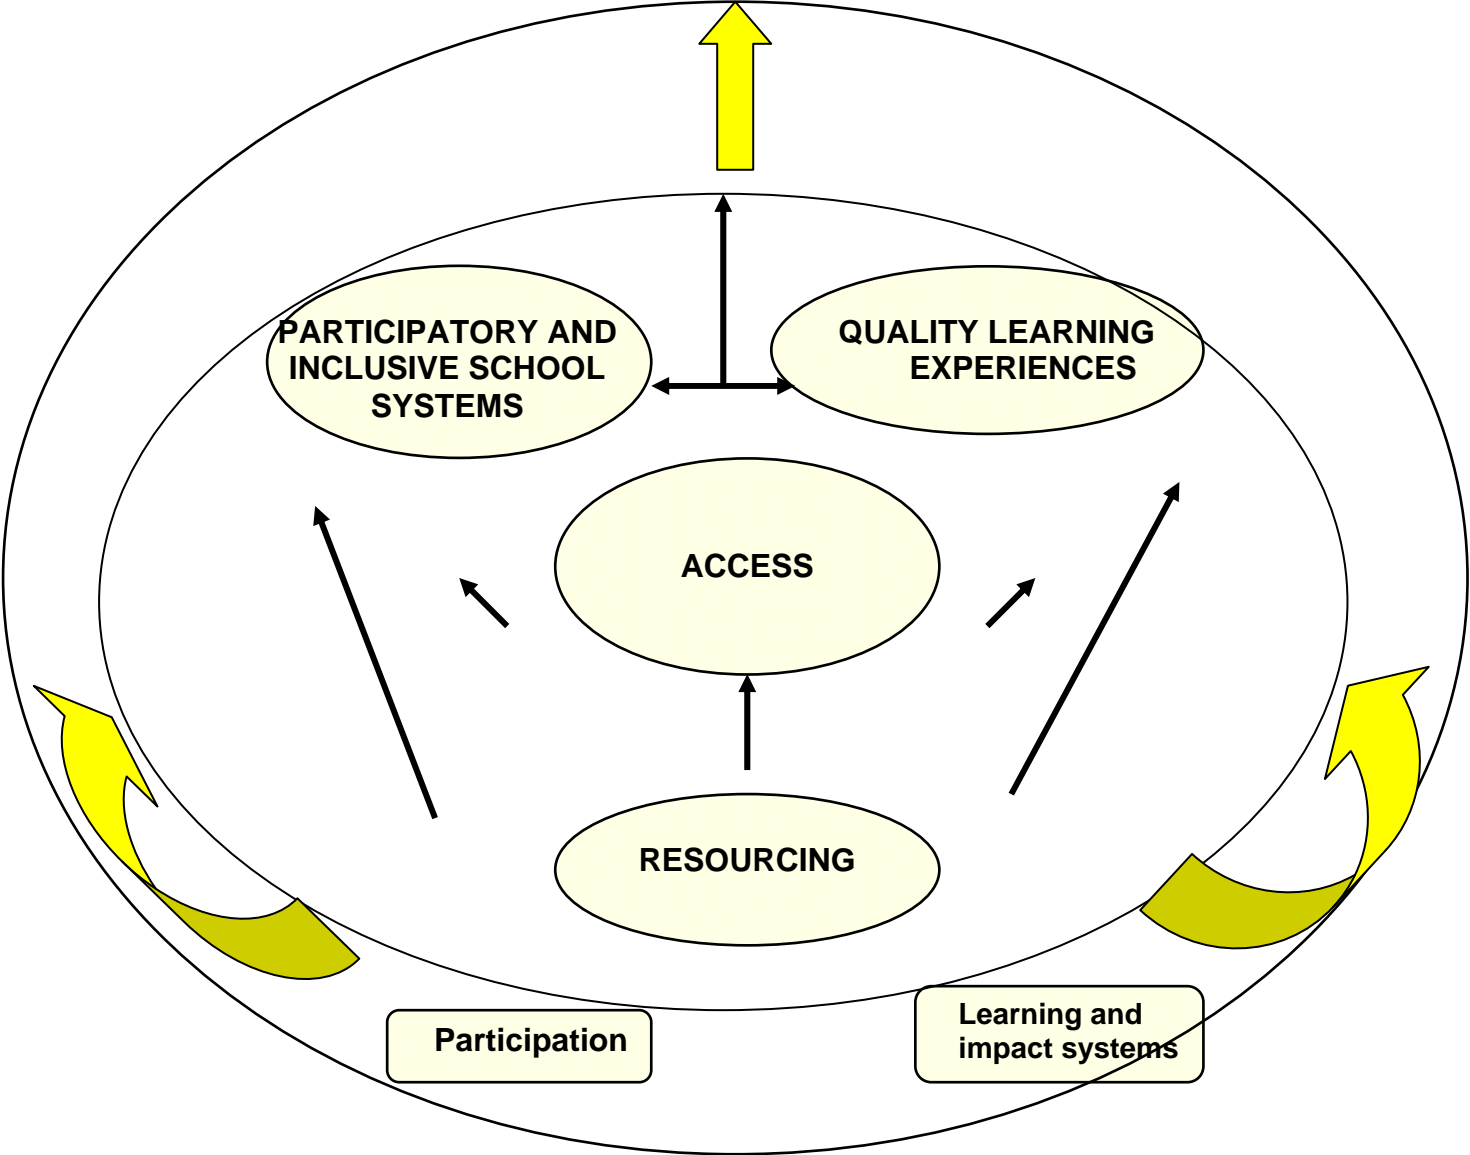

- % child population in SC operational areas/across child population that experiences sexual abuse (incidence rate)

**EDUCATION**

Save the Children's overall ten – year goal in education is: **To increase access to, and completion of, inclusive quality basic education.** All education programmes are contributing to achieving this overall goal through a number of specific objectives and outcomes. All our education work will focus specifically on children affected by conflict/disasters, ethnic minority children and the poorest 10% of children. In the education sector we are also committed to attaining a specific 'breakthrough' objective, that: 'Children caught up in crises can expect to get a basis education – we've helped get education established as a fundamental part of all emergency responses.'

The diagram below provides our conceptual framework of the process of change towards Save the Children's education overall objective.

To increase access to, and completion of, inclusive quality basic education

## Examples of outcome indicators

The diagram lists some of the broad outcomes which an education programme might aim to bring about. The table below gives examples of specific outcomes for each of our key areas of work (column 1) and suggests indicators with which to measure these (column 2). For each specific outcome, a number of alternative indicators are suggested. It also sets out:

3. The indicator's relevancy to the three Child Rights programming pillars and programming principles (column 3). Please see the new programming framework in the attachment.
4. Suggestions for data collection methods that could be used to generate each indicator (column 4). This column is still not fully developed and when finalised will be linked with the tool kit, which has been drafted and it is also in the piloting phase. The full explanation of the calculation process for the each indicator will be also provided for the final version of the manual.
5. General comments on the indicator including relevancy for the Rewrite the Future monitoring system and where it has been used before (column 5); and
6. An indication of whether the indicator can be usefully applied in emergency contexts (columns 6). The last section of the manual is related to emergency specific indicators and these indicators will be integrated in the relevant sections after reaching agreement on them.

The indicators are grouped by broad outcomes rather than by the evidence groups. All our education programmes are targeting specific groups of marginalised children (explained in the table on page 6) and indicators need to be disaggregated by key target groups identified at the beginning of the intervention.

The manual is developed with the idea to capture all hard work already invested in developing the Thematic Programme Plans and Country Plans for Rewrite the Future countries. All existing indicators from these documents are grouped and refined, and the new indicators are suggested for the areas important for achieving our overall objective which are less covered by the country level indicators. All key indicators developed for Rewrite the Future, key internationally agreed education indicators (EFA / MDGs), and good indicators (relevant for the type of work our programmes are implementing) tracked by the Alliance members and other big players in education have been introduced.

Whilst this section gives examples of a large number of indicators it is not exhaustive. This section of the guidance will be updated as more good examples are developed. The final version of the guidance will be presented in the excel format.

| Example of expected outcome as a result of education programme or emergency intervention                              | Example of indicator to measure change  | Relevancy to Child Rights pillars and principles | Possible data collection methods                  | Comment       | Apply to Emergency |

## Health and HIV

All SC UK Health and HIV programmes have the overarching objective to reduced maternal, newborn and child mortality and morbidity, and improve health outcomes of children and their carers.

This document is intended to provide some general guidance, and the outcomes and indicators listed are provided as examples. This list is not meant to be comprehensive.

The health and HIV team in Farringdon is working on a more detailed tool that will provide a menu of options also with regards to activities.

| Example of expected outcome as a result of health and HIV programme or emergency intervention | Example of indicator to measure change  | Relevancy to Child Rights pillar and principles | Possible data collection methods                          | Comment | Apply to Development | Apply to Emergency? |

## **HUNGER REDUCTION INDICATOR MENU**

All SC UK Hunger Reduction programmes have an overarching objective to ensure all children grow up properly nourished, to reduce both chronic and acute malnutrition.

The diagram below provides some examples of outcomes which hunger reduction programmes may be aiming to bring about, through the three pillars of child rights programming. Many of these outcomes are relevant for both development and emergency interventions.

| Example of expected outcome as a result of hunger programme or emergency intervention      | Example of indicator to measure change  | Relevance to CRP pillars and principles | Data collection methods | Comment                 | D | E |
|--|---|---|-------------------------|-------------------------|---|---|
| <b>IMPACT:</b>   |   |   |                         |                         |   |   |
| Reduction in number of malnourished children   | % of children aged <5 years with stunting   | Pillar 1, principle 1                   | AS                      |                         | X |   |
|  | % of children aged <5 years with acute malnutrition as % of global acute malnutrition                               |   | AS                      |                         | X | X |
|  | % of children aged <5 years with severe acute malnutrition  |   | AS                      |                         | X | X |
| <b>OUTCOME</b>   |   |   |                         |                         |   |   |
| <b>Improvement in immediate causes of malnutrition and treatment of acute malnutrition</b> |   |   |                         |                         |   |   |
| Improved dietary intake for young children   | #/% of infants aged 0 to 6 months who received only breast milk in the previous 24 hours                            | Pillar 1, principle 1                   | 24 h recall             |                         | X | X |
|  | #/% of infants aged 12 to 16 months who received breast milk in the previous 24 hours                               |   | 24 h recall             |                         | X | X |
|  | #/% of non-breastfed infants aged 0 to 6 months fed appropriately in previous 24 hours                              |   | 24 h recall             | See specific guidelines | X | X |
|  | #/% of infants aged 6 to 9 months who received solid/semi-solid/mushy foods in previous 24 hours                    |   | 24 h recall             |                         | X | X |
|  | #/% of children aged 6 to 24 months who received foods from at least 4 or more food groups in the previous 24 hours |   | 24 h recall             |                         | X | X |
|  | #/% of children aged 6 to 24 months who were fed with appropriate frequency (age-specific) in the previous 24 hours |   | 24 h recall             | Age-specific indicator  | X | X |
|  | #/% of children aged 6 to 24 months who had a minimum diversity and   |   | 24 h recall             | Combined                | X | X |

| Example of expected outcome as a result of hunger programme or emergency intervention | Example of indicator to measure change   | Relevance to CRP pillars and principles | Data collection methods | Comment                  | D | E |  |
|---|--|---|-------------------------|--------------------------|---|---|--|
|   | frequency diet in the previous 24 hours  |   |                         | indicator                |   |   |  |
|   | #/% of children aged 6 to 24 months who received an iron-rich food or an iron-fortified food in the previous 24 hours                            |   | 24 h recall             |                          | X | X |  |
|   | #/% of carers who reported adding a multiple micronutrient product to child's complementary food   |   | Programme monitoring    |                          | X | X |  |
|   | #/% of targeted households who receive multiple micronutrient product at each distribution   |   | Programme monitoring    |                          | X | X |  |
|   | #/% of adverse events reported by caregivers of children receiving multiple micronutrient product  |   | Programme monitoring    |                          | X | X |  |
|   | #/% of recipients of multiple micronutrient products for children are given an insecticide-treated bednet  |   | Programme monitoring    | In malaria-endemic areas | X | X |  |
| Reduction in illness among young children   | #/% of children reported to be ill with diarrhoea in previous 2 weeks  | Pillar 1, principle 1                   | AS                      |                          | X | X |  |
|   | #/% of children reported to be ill with acute respiratory infection in previous 2 weeks  |   | AS                      |                          | X | X |  |
|   | #/% of children reported to be ill with measles in previous 2 weeks  |   | AS                      |                          | X | X |  |
| Acute malnutrition identified and treated in accordance with international standards  | #/% of children aged 6 months to 5 years in therapeutic and supplementary feeding programme who are cured  | Pillar 1, principle 1                   | Programme monitoring    |                          | X | X |  |
|   | #/% of children aged 6 months to 5 years in therapeutic and supplementary feeding programme who default  |   | Programme monitoring    |                          | X | X |  |
|   | #/% of children aged 6 months to 5 years in therapeutic feeding programme who die  |   | Programme monitoring    |                          | X | X |  |
|   | #/% of children aged 6 months to 5 years in supplementary feeding programme who die  |   | Programme monitoring    |                          | X | X |  |
|   | #/% of children aged 6 months to 5 years in therapeutic or supplementary feeding programme whose weight gain meets international recommendations |   |                         |                          |   |   |  |
|   | #/% of cases of acute malnutrition referred and followed up  |   | Programme monitoring    |                          | X | X |  |

| Example of expected outcome as a result of hunger programme or emergency intervention | Example of indicator to measure change  | Relevance to CRP pillars and principles | Data collection methods                                 | Comment   | D | E |
|---|---|---|---|---|---|---|
|   | #/% of caregivers who answer correctly on how to recognise and treat severe acute cases of malnutrition   |   | Programme monitoring / questionnaires                   |   | X | X |
|   | #/% of beneficiaries in SC-supported treatment programmes who receive standard preventative health interventions in accordance with protocols                 |   | Programme monitoring                                    | Vitamin A supplement, measles vaccination, de-worming | X | X |
|   | #/% of MOH staff who participated in capacity-building trainings for treatment of acute malnutrition able to answer correctly all post training questions     |   | Programme monitoring / pre and post test questionnaires |   | X | X |
|   | #/% of CHWs/volunteers working with SC-supported treatment programmes trained for community mobilization able to answer correctly all post training questions |   | Programme monitoring / pre and post test questionnaires |   | X | X |
| <b>Improvement in the underlying causes of malnutrition</b>                           |   |   |   |   |   |   |
| <b>Safety Nets</b>  |   |   |   |   |   |   |
| Safety net programmes meet the changing needs of the poorest and most                 | #/ % of targeted households who receive cash transfer at each distribution  | Pillar 1, principle 3                   |   |   | X | X |
|   | #/% of households included in safety net programme who are classified as poor or vulnerable   | Pillar 1, Principle 3                   | HEA   |   | X |   |
|   | #/% of households who are able to cover their essential needs with transfers  | Pillar 1,                               |   |   |   |   |

| Example of expected outcome as a result of hunger programme or emergency intervention | Example of indicator to measure change   | Relevance to CRP pillars and principles | Data collection methods      | Comment | D | E |
|---|--|---|------------------------------|---------|---|---|
| vulnerable households   | (food, water, fuel)  | Principle 4                             |                              |         |   |   |
|   | #/% of households who are able to invest in productive assets with transfers (seeds, tools, education, etc.) | Pillar 1, Principle 4                   |                              |         |   |   |
|   | Link established between early warning system and safety nets programme                                      | Pillar 2                                |                              |         |   | X |
|   | # of households targeted during lean period  | Pillar 1, Principle 4                   |                              |         |   |   |
|   | Amount of transfers and % of a minimum essential basket of food and NFIs                                     |   |                              |         |   |   |
|   | Means of disbursement allow for easy scale up/scale down   |   |                              |         |   |   |
|   | % of households who participate in financial literacy/information sessions on cash transfers (if relevant)   | Pillar 1, Principle 1, 2, 3             |                              |         |   |   |
|   | # /% of children involved in livelihood monitoring / designing livelihood interventions/ monitoring impact   | Pillar 1, Principle 2                   |                              |         |   |   |
|   | # /% of children who participate in designing safety net programme   | Pillar 1, Principle 2                   |                              |         |   |   |
|   | #/% of children who participate in designing safety net programme  | Pillar 1, principle 2                   |                              |         |   |   |
| # of children involved in food security & livelihood monitoring                       | Pillar 1, principle 2  |   |                              |         |   |   |
